

Department of COMPUTER SCIENCE AND ENGINEERING

# **NATIONAL INSTITUTE OF TECHNOLOGY WARANGAL**

## **SCHEME OF INSTRUCTION AND SYLLABI**

**M.Tech. (Computer Science and Information Security)**

Effective from 2021-22

**Department of Computer Science and Engineering**

## **NATIONAL INSTITUTE OF TECHNOLOGY WARANGAL**

### **VISION**

Towards a Global Knowledge Hub, striving continuously in pursuit of excellence in Education, Research, Entrepreneurship and Technological services to the society

### **MISSION**

- Imparting total quality education to develop innovative, entrepreneurial and ethical future professionals fit for globally competitive environment.
- Allowing stake holders to share our reservoir of experience in education and knowledge for mutual enrichment in the field of technical education.
- Fostering product-oriented research for establishing a self-sustaining and wealth creating centre to serve the societal needs.

## **DEPARTMENT OF COMPUTER SCIENCE ENGINEERING**

### **VISION**

Attaining global recognition in Computer Science & Engineering education, research and training to meet the growing needs of the industry and society

### **MISSION**

- Imparting quality education through well-designed curriculum in tune with the challenging software needs of the industry.
- Providing state-of-art research facilities to generate knowledge and develop technologies in the thrust areas of computer science and engineering.
- Developing linkages with world class organizations to strengthen industry-academia relationships for mutual benefit.

## Department of Computer Science and Engineering:

### Brief about the Department:

The Department of Computer Science and Engineering was established in the year 1991. The department offers high quality undergraduate, postgraduate and doctoral programs. The B. Tech. (Computer Science and Engineering) program was started in the year 1983 with an intake of 20 students. The intake was subsequently increased to 120 in 2008. M. Tech (Computer Science and Engineering) program was started in 1987 with an intake of 18 and subsequently increased to 20 in 2008. M. Tech (Information Security) was introduced in the year 2008 Under ISEAP sanctioned by Ministry of Communication and Information Technology (MCIT), DOE, GOI, New Delhi with intake of 20. Later, it was renamed as Computer Science and Information Security. The Master of Computer Applications (MCA) program was started in 1986 with an intake of 30 and increased to 46 from 2008. B. Tech, M. Tech. (CSE) and M. Tech. (CSIS) programs were accredited in 2014 by NBA as per Washington Accord.

### List of Programs offered by the Department:

Program	Title of the Program
B.Tech.	Computer Science and Engineering
M. Tech.	Computer Science and Engineering
	Computer Science and Information Security
MCA	Master in Computer Applications
Ph. D.	Computer Science and Engineering

**Note:** Refer to the following weblink for Rules and Regulations of M.Tech. program:  
<https://www.nitw.ac.in/main/MTechProgram/rulesandregulations/>

**NOTE:** Refer to the following link for the guidelines to prepare dissertation report:  
<https://www.nitw.ac.in/main/PGForms/NITW/>

**M.TECH IN COMPUTER SCIENCE AND  
INFORMATION SECURITY**

**PROGRAM EDUCATIONAL OBJECTIVES**

<b>PEO1</b>	Apply knowledge of computer science to provide information security.
<b>PEO2</b>	Design and develop secure software systems using models as per user requirements.
<b>PEO3</b>	Work in teams using common security tools and environment to achieve project objectives
<b>PEO4</b>	Communicate effectively, demonstrate leadership qualities and exhibit professional ethics.
<b>PEO5</b>	Engage in lifelong learning to adapt to changing professional and societal needs for career advancement.

**MAPPING OF DEPARTMENT MISSION STATEMENTS WITH PROGRAM  
EDUCATIONAL OBJECTIVES**

<b>Mission Statement</b>	<b>PEO1</b>	<b>PEO2</b>	<b>PEO3</b>	<b>PEO4</b>	<b>PEO5</b>
Imparting quality education through well-designed curriculum in tune with the challenging software needs of the industry	2	3	2	2	2
Providing state-of-art research facilities to generate knowledge and develop technologies in the thrust areas of computer science and engineering	1	1	3	2	1
Developing linkages with world class organizations to strengthen industry-academia relationships for mutual benefit.	2	3	2	1	1

**PROGRAM OUTCOMES:** At the end of the program the student will be able to:

<b>PO1</b>	Engage in critical thinking and pursue investigations / research and development to solve practical problems.
<b>PO2</b>	Communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.
<b>PO3</b>	Demonstrate higher level of professional skills to tackle multidisciplinary and complex problems related to information security.
<b>PO4</b>	Specify secure protocols for safe handling the digital assets and for exchange of information among entities in the real world.
<b>PO5</b>	Design algorithms for secure multi-party computations and analyze their complexities.
<b>PO6</b>	Evaluate alternative designs of secure systems focusing on efficiency, scalability and cost parameters with compliance to legal, privacy and ethical issues of the operational field.

**MAPPING OF PROGRAM OUTCOMES WITH PROGRAM  
EDUCATIONAL OBJECTIVES**

<b>PO</b>	<b>PEO1</b>	<b>PEO2</b>	<b>PEO3</b>	<b>PEO4</b>	<b>PEO5</b>
<b>1</b>	2	3	1		1
<b>2</b>			1	2	1
<b>3</b>		2	2		1
<b>4</b>	3	3	2		2
<b>5</b>	3	1			2
<b>6</b>	2	3	3	2	2

## **CURRICULAR COMPONENTS**

### **Degree Requirements for M. Tech. in Computer Science and Information Security**

<b>Category of Courses</b>	<b>Credits</b>
Program Core Courses (PCC)	32
Professional Elective Courses (PEC)	12
Seminar I and II (SEM)	2
Comprehensive Viva-voce (CVV)	2
Dissertation Work (DW)	32
<b>Total</b>	<b>80</b>

**SCHEME OF INSTRUCTION****M.Tech (Computer Science and Information Security) Course Structure****M. Tech. I - Year I - Semester**

## Professional Elective Courses

## M. Tech. I - Year I - Semester

Semester	Elective Number	Course Code	Course Title
1	1	CS5211	Computational Number Theory
1	1	CS5212	Mathematical models for Internet
1	1	CS5213	Cryptanalysis
1	1	CS5214	Computability and Complexity
1	1	CS5215	Information Systems Control and Auditing
1	1	CS5216	Probabilistic Algorithms
1	1	CS5217	Biometric Security
1	1	CS5218	Unix Internals
1	1	CS5219	Secure Software Engineering
1	1	CS5220	Secure Cloud Computing
1	1	CS5221	Algorithmic Game Theory
1	1	CS5222	Digital Video Processing
1	1	CS5223	Information Security and Secure Coding
1	1	CS5224	Scripting languages for information security
1	1	CS5225	Wireless and Mobile Networks
[Electives from M.Tech. CSE program]			
1	1	CS5112	Advanced Databases
1	1	CS5113	Computer Vision & Image Processing
1	1	CS5116	Distributed Computing
1	1	CS5117	Quantum Computing
1	1	CS5119	Advanced Artificial Intelligence
1	1	CS5120	Big Data
1	1	CS5121	Bio-Informatics
1	1	CS5122	Advanced Data Structure

## M. Tech. I - Year II - Semester

2	2/3/4	CS5261	Foundations of Block Chain Technology
2	2/3/4	CS5262	Secure Operating Systems
2	2/3/4	CS5263	Design of Secure Protocols
2	2/3/4	CS5264	Secure Multiparty Computation
2	2/3/4	CS5265	Secure Protocols for Electronic Commerce
2	2/3/4	CS5266	Research study on Information Security
2	2/3/4	CS5267	Network Coding
2	2/3/4	CS5268	Public Key Infrastructure and Trust Management
2	2/3/4	CS5269	Cyber laws and Intellectual Property Rights
2	2/3/4	CS5270	Algorithmic Coding Theory
2	2/3/4	CS5271	Digital Forensics
2	2/3/4	CS5272	Secure Dependable and Distributed Computing
2	2/3/4	CS5273	Data Hiding
2	2/3/4	CS5274	Identity Based Cryptography
2	2/3/4	CS5275	Information Security Risk Management
2	2/3/4	CS5276	Privacy Enhancing Technologies

2	2/3/4	CS5277	Security of E-Based Systems
2	2/3/4	CS5278	Secure Group Communication
2	2/3/4	CS5279	Cyber crime and Information Warfare
2	2/3/4	CS5280	Cryptography and Game Theory
2	2/3/4	CS5281	Malware Analysis
2	2/3/4	CS5282	Cyber Security
2	2/3/4	CS5283	Elliptic Curve Cryptosystems
2	2/3/4	CS5284	Secure Systems Engineering
2	2/3/4	CS5285	Privacy and Security for online social networks
2	2/3/4	CS5161	Service Oriented Architecture and Micro-Services
[Electives from M.Tech. CSE program]			
2	2/3/4	CS5163	Software Reliability and Quality Management
2	2/3/4	CS5165	Formal Methods in Program Design
2	2/3/4	CS5167	Cognitive Radio Networks
2	2/3/4	CS5168	Model Driven Frameworks
2	2/3/4	CS5169	Exploratory and Interactive Data Analysis
2	2/3/4	CS5170	Internet of Things
2	2/3/4	CS5171	Real Time Systems
2	2/3/4	CS5172	Optimization in Computer Science
2	2/3/4	CS5173	High Performance Computing
2	2/3/4	CS5175	Human Computer Interaction
2	2/3/4	CS5176	Social Media Analytics
2	2/3/4	CS5178	Advanced Compiler Design
2	2/3/4	CS5179	Software Defined Networks
2	2/3/4	CS5180	Natural Language Processing
2	2/3/4	CS5181	Information Retrieval
2	2/3/4	CS5182	Soft Computing Techniques
2	2/3/4	CS5183	Advanced Data Mining
2	2/3/4	CS5184	Fault Tolerant Systems
2	2/3/4	CS5185	Fog and Edge Computing
2	2/3/4	CS5187	Reinforcement Learning

**DETAILED SYLLABUS**

<b>Course Code:</b> <b>CS5101</b>	<b>ADVANCED ALGORITHMS</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	----------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analyze worst-case running times of algorithms using asymptotic analysis.
<b>CO2</b>	Classify problems into different complexity classes corresponding to deterministic, approximation and parameterized algorithms.
<b>CO3</b>	Analyze the complexity of graph problems for different graph classes.
<b>CO4</b>	Analyze approximation algorithms and determine approximation factor.
<b>CO5</b>	Design and analyze efficient randomized algorithms.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	3	-	3	3	-	-
<b>CO2</b>	3	-	3	3	-	-
<b>CO3</b>	3	-	3	3	-	-
<b>CO4</b>	3	-	3	3	-	-
<b>CO5</b>	3	-	3	3	-	-

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Average case analysis of algorithms, Correctness of Master Theorem, Selection in Worst Case Linear Time, Large integer multiplications using FFT, Dynamic Programming - Matrix Chain Multiplication Problem, Optimal Binary Search Tree, Linear Algorithm for Domination in Trees, Maximum Cardinality Search and Chordal Graphs, Greedy Algorithm for Optimal Coloring of Chordal Graphs, NP-completeness, Efficient Reduction Proofs via Examples, Domination in Subclasses of Bipartite Graphs and Chordal Graphs, Exact Exponential Algorithm for Domination Problems, Treewidth, Parameterized Complexity Classes, APX-hardness and APX-completeness, Approximation Algorithm for Connected Dominating Set Problem, The Stable Marriage Problem, The Coupon Collector's Problem.

**Text Books/Reference Books/Online Resources:**

1. *Introduction to Algorithms*, Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest and Clifford Stein, PHI, 2009, Third Edition.

2. *Fundamentals of Computer Algorithms*, Ellis Horowitz, Sartaj Sahni and Sanguthevar Rajasekaran, Universities Press, 2011, Second Edition.
3. *Algorithmic Graph Theory and Perfect Graphs*, Martin Charles Golumbic, 2004, Elsevier, Second Edition.
4. *Treewidth: Computations and Approximations*, Ton Kloks, Springer-Verlag, 1994.
5. *Graph Classes A Survey* : Andreas Brandstädt, Van Bang Le and Jeremy P. Spinard, SIAM, 1987.
6. *Algorithms and Complexity*, Herbert S. Wilf, AK Peters/CRC Press, 2002, Second Edition.
7. *Parameterized Complexity*, Rodney G. Downey and M. R. Fellows, Springer, 2012.
8. *Approximation Algorithms*, Vijay V. Vajirani, Springer, 2001.
9. *Randomized Algorithms*, Rajeev Motwani and Prabhakar Raghavan, Cambridge University Press, 1995.
10. *Computers and Intractability: A Guide to the theory of NP-Incompleteness*, Michael R. Garey and David S. Johnson, W.H. Freeman & Co., 1979, First Edition.
11. *Topics in Domination in Graphs*, Teresa W. Haynes, Stephen T. Hedetniemi and Michael A. Henning, Springer, 2020.

<b>Course Code:</b> <b>CS5201</b>	<b>Web and Database Security</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	----------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Identify access control methods for secure web & database application development
<b>CO2</b>	Analyse vulnerabilities in the Web and Database applications.
<b>CO3</b>	Design & Evaluate methods for web & database intrusion detection
<b>CO4</b>	Apply security audit methods
<b>CO5</b>	Design Secure Database schema

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1	1	1	1	1	1
<b>CO2</b>		1	1	1	1	1
<b>CO3</b>		1	2	2	1	2
<b>CO4</b>						2
<b>CO5</b>	1		2	2		1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Database Basics: Overview of Relational Model, SQL, Building of database, Manipulation of data; Goals of Database Security, access points of database security, database security levels, and menaces to databases. Database security methods and methodologies, Security controls: flow control, inference control and access control, Database Application Security models – Types of users, access matrix model, access modes model, commonly used application types. Classes of access control: Discretionary access control (DAC), Mandatory access control (MAC) and Role based Access control (RBAC); Discretionary Access Control (DAC) mechanisms such as capabilities, profiles, access control lists, passwords, and permission bits. RBAC based security models features like User role assignment, Support for role relationships and Constraints, Assignable privileges. MAC based security models. Implementing Fine Grained access controls with views, Virtual Private databases: need for VPDs, Implementing VPD using views, The Database Security Design includes the controls that will be implemented to restrict users from accessing information, based on how the information is classified and the security model. HTML Injection and Cross- Site Scripting, Cross-Site Request, Forgery, SQL Injection and Data Store Manipulation, Breaking Authentication Schemes, Abusing Design Deficiencies, Leveraging Platform Weaknesses, Statistical database security; Database privacy – Hippocratic databases

**Text Books/Reference Books/Online Resources:**

4. Mike Shema, *Hacking Web Apps Detecting and Preventing Web Application Security Problems*, Syngress publications- Elsevier, 2012

<b>Course Code :</b> <b>CS5202</b>	<b>Foundations of Cryptography</b>	<b>Credits</b> <b>3-0-0: 3</b>
---------------------------------------	------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand Number Theory and Algebra for design of cryptographic algorithms
<b>CO2</b>	Construct finite fields and apply number theoretic concepts in cryptographic algorithm
<b>CO3</b>	Analyse and compare symmetric-key encryption public-key encryption schemes based on different security models
<b>CO4</b>	Prove the security of cryptographic algorithms against attack models
<b>CO5</b>	Investigate and apply homomorphic encryption

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2		1	2	2	
<b>CO2</b>	1				1	
<b>CO3</b>	2		1	2	2	3
<b>CO4</b>	2	1	2	3	3	3
<b>CO5</b>	3	2	2	3	2	3

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Number Theory – Divisibility, Congruences, Quadratic residues and residuacity, Abstract Algebra – Groups, rings, fields, construction of finite fields, vector space, Galois field cryptography- Notion and need for security proofs, Attack models, Perfect secrecy, Computational secrecy, One-time Pad (OTP), Pseudo-random generator (PRG), Pseudo-random function (PRF), design principles of stream and block ciphers, stream and block ciphers (DES, AES), Attacks on stream and block ciphers, Semantic security, Block cipher modes, Message Integrity – MAC and cryptographic hash function, NMAC, HMAC, Authenticated encryption.

One way function, Cryptographic hardness assumptions, Key exchange algorithms, Public key encryption algorithms (RSA, ElGamal, Rabin, ECC), Attacks on text book encryption algorithms, Semantically secure encryption algorithms, Security against chosen plain text and chosen cipher text attacks, Zero knowledge proofs, homomorphic encryption, Post quantum Cryptography.

**Text Books/Reference Books/Online Resources:**

1. N. Koblitz, *Number Theory and Cryptography*, Springer, 2001
2. J. Katz and Y. Lindell, *Introduction to Modern Cryptography*, Third edition CRC press, 2020.
3. Wenbo Mao, *Modern Cryptography: Theory and Practice*, first edition, Pearson Education, 2004.
4. Menezes, et.al, *Handbook of Applied Cryptography*, CRC Press, 2004.
5. Golreich O, *Foundations of Cryptography*, Vol.1.2, Cambridge University Press, 2004.

<b>Course Code:</b> <b>CS5203</b>	<b>Data Mining</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	--------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analyze and evaluate performance of algorithms for Association Rules
<b>CO2</b>	Analyze Classification and Clustering algorithms
<b>CO3</b>	Analyze Algorithms for sequential patterns.
<b>CO4</b>	Extract patterns from time series data.
<b>CO5</b>	Develop algorithms for Temporal Patterns.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2	2	1	3	2	3
<b>CO2</b>	1	1	1	3	3	3
<b>CO3</b>	2	1	1	3	3	2
<b>CO4</b>	1		1	3	2	3
<b>CO5</b>	1	1	2	2	2	2

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Data Mining Techniques: Basic concepts of Association Rule Mining, Frequent Item set mining, Mining various kinds of association rules, Classification by decision tree induction, Bayesian Classification, Rule- based Classification, Classification Back-propagation, Associative Classification, Lazy Learners, Rough set approach, Clustering methods, Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Measuring Data Similarity and Dissimilarity Partition based Clustering, Hierarchical based clustering, Density based clustering.

Sequential Pattern Mining concepts, primitives, scalable methods; Transactional Patterns and other temporal based frequent patterns, Mining Time series Data, Periodicity Analysis for time related sequence data, Trend analysis, Similarity search in Time-series analysis;

**Text Books/Reference Books/Online Resources:**

1. Jiawei Han and M Kamber, *Data Mining Concepts and Techniques*, Second Edition, Elsevier, 2011.
2. Vipin Kumar, Pang-Ning Tan, Michael Steinbach, *Introduction to Data Mining*, Addison Wesley, 2006.
3. G Dong and J Pei, *Sequence Data Mining*, Springer, 2007.

<b>Course Code:</b> <b>CS5204</b>	<b>Computational Mathematics Practice</b>	<b>Credits</b> <b>1-1-2: 3</b>
--------------------------------------	-------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Apply the concepts of Linear Algebra.
<b>CO2</b>	Use the Mathematical concepts to solve the given problem.
<b>CO3</b>	Apply the concepts of Probability and Distribution for a given problem.
<b>CO4</b>	Use the concepts of Discrete Mathematics for solving the given problem.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2		2		1	1
<b>CO2</b>	2		1		1	1
<b>CO3</b>	2		1		1	1
<b>CO4</b>	2		2		1	1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Mathematical Foundations: Introduction and Motivation.

Linear Algebra: System of linear equations, Matrices, Solving Systems of Linear Equations, Vector Spaces, Linear Independence, Basis and Rank, Linear Mappings.

Analytic Geometry: Norms, Inner Product, Lengths and Distances, Angles and Orthogonality, Orthonormal Basis, Orthogonal Complement, Fourier Transform.

Matrix Decomposition: Determinant and Trace, Eigen values and Eigen vectors, Eigen decomposition and Diagonalization, Single Value Decomposition, Matrix Approximation.

Vector Calculus: Differentiation of univariate functions, Partial Differentiation and Gradients, Gradients of vector-values functions, Gradients of Matrices.

Probability and Distribution: Construction of a Probability Space, Discrete and Continuous Probabilities, Sum Rule, Product Rule, Bayes Theorem, Summary Statistics and Independence.

Discrete Mathematics: Sets and Relations, Mathematical Logic and Induction, Elementary Combinatorics, Recurrence Relations, Lattices as Partially Ordered Sets, Graphs, Trees. Groups, Rings and Fields.

**Laboratory:**

Lab programs to understand and demonstrated the topics in

1. Problems related to Array, Stack, Queue, Linked Lists, Trees and Graphs.
2. Linear Algebra
3. Analytic Geometry
4. Matrix Decomposition
5. Vector Calculus
6. Probability and Distribution
7. Discrete Mathematics

**Text Books/Reference Books/Online Resources:**

1. Marc Peter Deisenroth, A. Aldo Faisal and Cheng Soon Ong, *Mathematics for Machine Learning*, Cambridge University Press, 2020. (for topics other than Discrete Mathematics)

3. J. P. Tremblay and R. Manohar, *Discrete Mathematical Structures with Applications to Computer Science*, MGH, 1997.
4. Kenneth H. Rosen, *Discrete Mathematics and its Applications with Combinatorics and Graph Theory*, Seventh Edition, MGH, 2011.

<b>Course Code:</b> <b>CS5211</b>	<b>Computational Number Theory</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analyse large integer computations in $Z_n$
<b>CO2</b>	Analyse primality testing and integer factorization algorithms
<b>CO3</b>	Develop algorithms for computations in groups, rings and fields
<b>CO4</b>	Develop algorithms for computations in polynomial rings
<b>CO5</b>	Develop algorithms for computations in finite fields

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1			1	1	1
<b>CO2</b>	1			1	2	1
<b>CO3</b>	1		2	2	1	2
<b>CO4</b>	1		2	2	1	2
<b>CO5</b>	1		2	2	1	2

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Basic properties of the integers :Congruences, Computing with large integers, Computing in  $Z_n$ , Euclid's algorithm. The distribution of primes, Finite and discrete probability distributions, Hash functions, Probabilistic algorithms. Abelian groups, Polynomial rings, Ideals and quotient rings, homomorphisms and isomorphisms, Probabilistic primality testing, Finding generators and discrete logarithms in  $Z_p$ , Finding a generator for  $Z_p$ , Quadratic residues and quadratic reciprocity, Computational problems related to quadratic residues. Modules and vector spaces; Matrices; Sub exponential-time discrete logarithms and factoring, Algebras, Unique factorization of polynomials, General properties of extension fields, Formal power series and Laurent series, Unique factorization domains, Polynomial arithmetic and applications, Linearly generated sequences and applications. Finite fields - Algorithms for finite fields, Testing and constructing irreducible polynomials, Computing minimal polynomials in  $F[X]/(f)$ , Factoring polynomials: the Cantor–Zassenhaus algorithm, Factoring polynomials: Berlekamp's algorithm, Deterministic factorization algorithms, Faster square-free decomposition. Deterministic primality testing.

**Text Books/Reference Books/Online Resources:**

1. Victor Shoup, *A Computational Introduction to Number Theory and Algebra*, Cambridge University Press, 2008
2. Henri Cohen, *A Course in Computational Algebraic Number Theory*, Springer-Verlag, 2000

<b>Course Code:</b> <b>CS5212</b>	<b>Mathematical Models for Internet</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Illustrate TCP/IP protocol stack including IPv4 and IPv6
<b>CO2</b>	Analysis of network (Internet) Traffic using queuing disciplines
<b>CO3</b>	Analysis of congestion control algorithms by considering network throughput and delay
<b>CO4</b>	Design of routing algorithms for the Internet

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1			1		
<b>CO2</b>	1			1	1	1
<b>CO3</b>	1			1	1	2
<b>CO4</b>	2			1	2	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Introduction to Internet and TCP/IP protocol stack, IPv4 and IPv6, Stochastic Processes (The Poisson process and Markov chains), Analysis of network (Internet) Traffic using queuing disciplines (M/M/1, M/M/1/C and M/M/C/C), Randomized algorithms and File sharing in the Internet, Networks and Graphs (including the internet graph and web graph), Analysis of Algorithms for Congestion Control, Performance Analysis of TCP Reno, TCP Tahoe and TCP Vegas, Linear Analysis with Delay: The single link case, Linear Analysis with Delay: The network case, Routing protocols for next generation Internet traffic, Mathematical models for Internet of Things.

**Text Books/Reference Books/Online Resources:**

2. D. Bertsekas and R. Gallagar, *Data Networks*, PHI, 2<sup>nd</sup> Edition, 1992
3. RayadurgamSrikant, *The Mathematics of Internet congestion control (systems and control: foundations and applications)*, 1<sup>st</sup> Edition, Birkhauser, 2003.
4. S. M. Ross, *Stochastic Processes*, Wiley, 2<sup>nd</sup> Edition, 1996

<b>Course Code:</b> <b>CS5213</b>	<b>Cryptanalysis</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	----------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analysis of vulnerabilities in an elliptic curve cryptography
<b>CO2</b>	Identify security vulnerabilities of different types of cryptosystems.
<b>CO3</b>	Analyze methods of attacking symmetric key cryptography
<b>CO4</b>	Analyze methods of public key cryptography
<b>CO5</b>	Development of secure cryptosystem.

**Course Articulation Matrix:**

Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6
<b>CO1</b>	1		1	2		1
<b>CO2</b>	1		1	2		2
<b>CO3</b>	1		1	2		1
<b>CO4</b>	1		1	2		1
<b>CO5</b>	2		2	3	2	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Modern Cryptography Preliminaries - Defining security in cryptography, Number theory concepts Linear Algebra, Sieving methods, Tutorial, Introduction to symmetric key cryptography, Symmetric ciphers- triple DES, Modes of operation, Stream ciphers –RC4, Stream ciphers – Attacks, Linear analysis. Differential analysis, Tutorials, Introduction to public key cryptography, Public key cryptography and RSA. Key management and Distribution, Other public Key Cryptosystems, Attacks on RSA, Attacks on Diffie-Hellman Attacks on ElGamal. Introduction to Discrete Logarithm Problem. Shanks baby step and Gaint step algorithm, Pollard Rho, Pollard Kangaroo, Pohlig-Hellman. Introduction to index calculus method, Number Field Sieve method, Introduction to Elliptic Curve Cryptography, Generic algorithms to solve ECDLP, Anomalous attack, MOV attack.

**Text Books/Reference Books/Online Resources:**

1. Antoine Joux, *Algorithmic Cryptanalysis*, CRC Press, 2009
2. Gregory V. Bard, *Algebraic Cryptanalysis*, Springer, 2009.

<b>Course Code:</b> <b>CS5214</b>	<b>Computability and Complexity</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand the limits of models of computation under the Church-Turing hypothesis.
<b>CO2</b>	Classify problems into appropriate complexity classes.
<b>CO3</b>	Identify the possibility of intractability for a given problem.
<b>CO4</b>	Apply the concept of interactive proofs in the analysis of optimization problems.

**Course Articulation Matrix:**

Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6
<b>CO1</b>	1			1		
<b>CO2</b>	1					1
<b>CO3</b>				1		1
<b>CO4</b>	1		1	2		1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Computability:** Models of computation, The Church–Turing Thesis, Turing model of computation, Variants of Turing machines, Decidable, semi-decidable and undecidable problems, Post correspondence problem, Mapping reducibility, The recursion theorem, The Rice's theorem, Decidability of logical theories and Turing reducibility.

**Complexity:** Introduction to complexity theory, Nondeterminism and NP-completeness, Diagonalization, Relations between the standard complexity classes, The Cook–Levin theorem, Space complexity, Savitch's theorem, PSPACE, PSPACE-completeness, Circuits, Randomized computation and complexity, Interactive proof systems, Complexity of counting, Parallel computation and complexity, Probabilistic complexity classes, Decision trees, Communication complexity, Circuit complexity, Probabilistically checkable proofs, Quantum computation and Logic in complexity theory.

**Text Books/Reference Books/Online Resources:**

<b>Course Code:</b> <b>CS5215</b>	<b>Information Systems Control and Auditing</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-------------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Ability to recognize the propensity of errors and remedies in processes involving Information Technology
<b>CO2</b>	A consummate knowledge of risks and controls in IT operations in Industry
<b>CO3</b>	An ability to provide protective IT security guidelines for various types of Industries
<b>CO4</b>	The necessary wherewithal to become an IS Auditor and/or Security specialist eventually
<b>CO5</b>	Evaluate asset safeguarding and data integrity, system effectiveness and system efficiency

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1		2			2
<b>CO2</b>	1	1	1	1	1	1
<b>CO3</b>			1			1
<b>CO4</b>			2			
<b>CO5</b>			2			1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Introduction:** Overview of Information Systems Auditing. Conducting an Information Systems Audit. Management and the application Control Framework: Top Management Controls, Security Management Controls. Operations Management Controls. Quality Assurance Management Controls. Boundary Controls. Communication Controls.

**Evidence Collection and Evidence evaluation:** Audit Software. Concurrent Auditing Techniques. Interviews, Questionnaires, and Control Flowcharts. Evaluating Asset Safeguarding and Data Integrity. Evaluating System Effectiveness and System Efficiency. Managing the Information Systems Audit Function.

**Practice study:** CISA examination questions.

**Text Books/Reference Books/Online Resources:**

1. Ron Weber, *Information Systems Control and Audit*, Pearson Education, 1999
2. John B. Kramerk, *The CISA Prep Guide*, Wiley Publications, 2003
3. *Information Systems Control and Audit*, BOS, Institute of Chartered Accountants of India, New Delhi, 2013

<b>Course Code:</b> <b>CS5216</b>	<b>Probabilistic Algorithms</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	---------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Design and analyze efficient randomized algorithms
<b>CO2</b>	Apply tail inequalities to bound error-probability
<b>CO3</b>	Analyze randomized algorithms with respect to probability of error and expected running time.
<b>CO4</b>	Apply probabilistic method to demonstrate existence of combinatorial objects
<b>CO5</b>	Apply to graph problems

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2	1	1	2	1	2
<b>CO2</b>				1		
<b>CO3</b>	1			1	2	2
<b>CO4</b>	1	1	1	1	1	1
<b>CO5</b>	1	1	1		1	

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Las Vegas and Monte Carlo Algorithms, Computational Model and Complexity Classes, Game Tree Evaluation, The Markov and Chebyshev Inequalities, The Stable Marriage Problem, The Coupon Collectors Problem, The Chernoff Bound, Routing in a Parallel Computer, The Probabilistic Method: Overview, probabilistic analysis, use of indicator random variables, Randomly permuting arrays, Birthday paradox, analysis using indicator random variables, Balls and bins, Streaks, Online hiring problem, Maximum Satisfiability, Expanding Graphs, The Lovasz Local Lemma, Markov Chains, Random Walks on Graphs, Graph Connectivity, Expanders and Rapidly Mixing Random Walks, Pattern Matching, Random Traps, Skip Lists, Hash Tables, Linear Programming, The Min-Cut Problem, Minimum Spanning Trees, The DNF Counting Problem, The Online approximations paging Problem, Adversary Models and Paging against an Oblivious Adversary, Randomized number theoretic and algebraic algorithms

**Text Books/Reference Books/Online Resources:**

1. Rajeev Motwani, Prabhakar Raghavan, *Randomized Algorithms*, Cambridge University Press, 1995.
2. J. Hromkovic, *Design and Analysis of Randomized Algorithms*, Springer 2005.

<b>Course Code:</b> <b>CS5217</b>	<b>Biometric Security</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	---------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analyze biometric systems
<b>CO2</b>	Design basic biometric system applications.
<b>CO3</b>	Identify the acceptance issues associated with the design and implementation of biometric systems.
<b>CO4</b>	Identify various Biometric security issues.
<b>CO5</b>	Design biometric system to solve security issues.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1					3
<b>CO2</b>		1				2
<b>CO3</b>	1		1		2	
<b>CO4</b>	1			1		
<b>CO5</b>					1	1

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Biometric Fundamentals And Standards : Biometrics versus traditional techniques, bio metric in identification system biometric processes: Biometric matching methods, Performance measures in biometric systems, Assessing the privacy risks of biometrics - Designing privacy sympathetic biometric systems, Different biometric standards. Physiological Biometrics: Facial scan, finger print, Ear scan, Retina vascular pattern- Behavioral Biometrics: Hand print biometrics-DNA biometrics- Signature scan, Keystroke scan, Voice scan, Gait recognition, Gesture recognition, User Interfaces: Biometric interfaces: Human machine interface - BHMI structure, Human side interface: Iris image interface -Hand geometry and fingerprint sensor, Machine side interface: Parallel port - Serial port - Network topologies, Case study: Palm Scanner interface. Biometric Applications: Categorizing biometric applications, application areas - E-commerce and retail/ATM, Issues in deployment, Biometrics in medicine. Biometric Privacy- Assessing the privacy risks of biometrics - Designing privacy sympathetic biometric systems,

<b>Course Code:</b> <b>CS5218</b>	<b>Unix Internals</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Design and implement Unix kernel data structures and algorithms
<b>CO2</b>	Analyze synchronization problems in uniprocessor and multiprocessor systems
<b>CO3</b>	Evaluate the scheduling requirements of different types of processes and find their solutions
<b>CO4</b>	Implement user level thread library and mimic the behavior of Unix kernel for scheduling, synchronization and signals.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2		1	1	3	
<b>CO2</b>				2	3	1
<b>CO3</b>				2	3	1
<b>CO4</b>	1		2	2	3	1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Introduction to UNIX, The process and the kernel, Mode, space and context, Process abstraction, executing in kernel mode, synchronization by blocking interrupts, process scheduling. Introduction to Threads: Fundamental abstractions, Lightweight process design, issues to consider, User level thread libraries, scheduler activations, Multi-threading on Solaris, Pthreads library, Thread library implementation Using `ucontext_t` structures. Signals: Signal generation and handling, Unreliable signals, Reliable signals, Signals in SVR4, Signals implementation, Exceptions, Process Groups. Process Scheduling: Clock interrupt handling, Scheduler Goals, Traditional UNIX scheduling, Scheduling case studies. Synchronization and Multiprocessing: Introduction, Synchronization in Traditional UNIX Kernels, Multiprocessor Systems, Multiprocessor synchronization issues, Semaphores, spin locks, condition variables Read-write locks for multiprocessor systems, Reference counts and other considerations. Kernel Memory Allocators: Resource map allocator, Simple power-of-two allocator, McCusick-Karels Allocator, Buddy system, SVR4 Lazy Buddy allocator, OSF/1 Zone Allocator, Hierarchical Allocator, Solaris Slab Allocator. File system interface

and framework: The user interface to files, File systems, Special files, File system framework, The Vnode/Vfs architecture, Implementation Overview, File System dependent objects, Mounting a file system, Operations on files. File System Implementations : System V file system (s5fs) implementation, Berkeley FFS, FFS functionality enhancements and analysis, Temporary file systems, Buffer cache and other special-purpose file systems.

**Text Books/Reference Books/Online Resources:**

2. Richard Stevens, Stephen Rago, *Advanced Programming in the UNIX Environment*, Pearson Education, 2/e, 2005

<b>Course Code:</b> <b>CS5219</b>	<b>Secure Software Engineering</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Evaluate secure software engineering problems, including the specification, design, implementation, and testing of software systems.
<b>CO2</b>	Elicit, analyze and specify security requirements through SRS
<b>CO3</b>	Design and Plan software solutions to security problems using various paradigms
<b>CO4</b>	Model the secure software systems using Unified Modeling Language Sec(UMLSec)
<b>CO5</b>	Develop and apply testing strategies for Secure software applications

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2		2	1		2
<b>CO2</b>	2	2	1	1		2
<b>CO3</b>	2		2	1		2
<b>CO4</b>	1	1	1	1		1
<b>CO5</b>	2		2	1		2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Software assurance and software security, threats to software security, sources of software insecurity, benefits of detecting software security, managing secure software development, Defining properties of secure software, how to influence the security properties of software, how to assert and specify desired security properties, Secure software Architecture and Design: Software security practices for architecture and design: Architectural risk analysis, software security knowledge for Architecture and Design: security principles, security guidelines, and attack patterns, secure design through threat modeling, Writing secure software code: Secure coding techniques, Secure Programming: Data validation, Secure Programming: Using Cryptography Securely, Creating a Software Security Programs. Secure Coding and Testing: code analysis- source code review, coding practices, static analysis, software security testing, security testing consideration through SDLC

<b>Course Code:</b> <b>CS5220</b>	<b>Secure Cloud Computing</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analyze the security and privacy issues in the cloud computing.
<b>CO2</b>	Understand the auditing and compliance process.
<b>CO3</b>	Build security as a cloud service for secure cloud computing.
<b>CO4</b>	Implement various case studies.
<b>CO1</b>	Analyze the security and privacy issues in the cloud computing.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO 1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1		1	2	2	1
<b>CO2</b>	1			1	2	2
<b>CO3</b>			1	2	2	2
<b>CO4</b>				2	1	2
<b>CO5</b>			1	1	1	1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Cloud Computing Defined, SPI Framework, Traditional Software Model, Cloud Services Delivery Model, Cloud Deployment Models, Key Drives to Adopting the Cloud, Impact of Cloud Computing on Users, Governance in the Cloud, Barriers to Cloud Computing Adoption in the Enterprise, Infrastructure Security: The Network Level, The Host Level, The Application Level, Data Security and Storage, Identity and Access Management, Security Management on the Cloud, Privacy, Audit and Compliance, Cloud Service Providers, Security as a Cloud Service, Impact of Cloud Computing on the Role of Corporate IT, The Future of the Cloud, Case Studies.

<b>Course Code:</b> <b>CS5221</b>	<b>Algorithmic Game Theory</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	--------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analyze games based on complete and incomplete information about the players
<b>CO2</b>	Analyze games where players cooperate
<b>CO3</b>	Compute Nash equilibrium
<b>CO4</b>	Apply game theory to model network traffic
<b>CO5</b>	Analyze auctions using game theory

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1		2	1	1	1
<b>CO2</b>	1		2	1	1	1
<b>CO3</b>	1			1		1
<b>CO4</b>	1		2	2	1	2
<b>CO5</b>	1		1	1	1	1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Noncooperative Game Theory: Games in Normal Form - Preferences and utility, examples of normal-form, Analyzing games: Pareto optimality, Nash equilibrium, Maxmin and minmax strategies, dominated strategies, Rationalizability, Correlated equilibrium; Computing Solution Concepts of Normal-Form Games: Computing Nash equilibria of two-player, zero-sum games, Computing Nash equilibria of two-player, general-sum games, Complexity of computing Nash equilibrium, Lemke–Howson algorithm, Searching the space of supports, Computing Nash equilibria of n-player, general-sum games, Computing maxmin and minmax strategies for two-player, general-sum games, Computing correlated equilibria; Games with the Extensive Form: Perfect-information extensive-form games, Subgame-perfect equilibrium, Computing equilibria, Imperfect-information extensive-form games, Sequential equilibrium; Other Representations: Repeated games: Finitely repeated games, Infinitely repeated games, automata, Stochastic games. Bayesian games: Computing equilibria; Coalitional Game Theory: Transferable Utility, Analyzing Coalitional Games, The Shapley Value, The Core; Mechanism Design: strategic voting, unrestricted preferences,

Implementation, quasilinear setting, Efficient mechanisms, Computational applications of mechanism design, Task scheduling, Bandwidth allocation in computer networks; Auctions: Single-good auctions, Canonical auction families, Bayesian mechanisms, Multiunit auctions, Combinatorial auctions.

**Text Books/Reference Books/Online Resources:**

2. Ronald Cohn Jesse Russell, *Algorithmic Game Theory*, VSD Publishers, 2012.

<b>Course Code:</b> <b>CS5222</b>	<b>Digital Video Processing</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	---------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Use the suitable image/video acquisition approach, representation and quality assessment for a given scenario.
<b>CO2</b>	Apply image/video processing operations for enhancement and restoration.
<b>CO3</b>	Understand image/video compression standards
<b>CO4</b>	Solve a video indexing, summarization, browsing and retrieval problem
<b>CO5</b>	Implement an approach to solve a video analytics problem

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1	2	1			
<b>CO2</b>	2	2				
<b>CO3</b>	-	2	1			
<b>CO4</b>	3	2	1			1
<b>CO5</b>	3	2	1		1	1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Introduction** – Introduction to digital image and video processing.

**Image/Video processing** – Intensity transformations, Applications of linear filtering and non-linear filtering. Morphological operations. Colour image processing. Features for Image and Video processing. Geometric transforms and Image registrations, Image segmentation and analysis. Spatiotemporal noise filtering, coding artifact reduction, Blotch detection and removal, video stabilization, and recent image/video operations and features in contemporary literature.

**Image Compression** – lossless coding, block transform coding, fundamentals of vector quantization, wavelet image compression, JPEG image compression.

**Video Compression** – basic concepts and techniques of video coding and the H.261 Standard, spatiotemporal subband/Wavelet Video Compression, Object-based video coding, introduction to video coding standards and formats: H.261, MPEG-2/DVB, MPEG-4, H.264/AVC, H.265/HEVC, H.266/VVC.

**Image and Video Acquisition** – Image scanning, sampling and interpolation, video sampling and interpolation. Recent standards and practices in image and video acquisition.

**Video Quality Assessment** – Introduction, HVS Modelling based methods, feature based methods, motion modelling-based methods, and approaches based on contemporary research.

**Indexing, Summarization, Browsing and Retrieval** – Introduction, Image and Video features, Video analysis, video representation, video browsing and video retrieval. Video features in contemporary research.

**Video Analytics** – Review of video analytics algorithms for: motion and change detection, object detection, object tracking, behaviour analysis, face recognition, Image and Video classification and recent visual analytics approaches in contemporary research.

**Text Books/Reference Books/Online Resources:**

1. Alan C Bovik, *Handbook of Image and Video Processing*, 2<sup>nd</sup> Edition, Academic Press, 2005.
2. Alan C. Bovik, *The Essential Guide to Video Processing*, 1<sup>st</sup> Edition, Academic Press, 2009.
3. Rafael C. Gonzalez, Richard E. Woods, *Digital Image Processing*, 4<sup>th</sup> Edition, Pearson, 2018.
4. Recent articles in Research and Industry.

<b>Course Code:</b> <b>CS5223</b>	<b>Information Security and Secure Coding</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course, the student will be able to:

<b>CO1</b>	Analyse and understand secure design
<b>CO2</b>	Analyse and apply authentication and authorization principles
<b>CO3</b>	Design secure application
<b>CO4</b>	Writing secure software

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2	2	2	3	3	3
<b>CO2</b>	1	1	3	2	2	2
<b>CO3</b>	3	2	2	3	3	3
<b>CO4</b>	1	3	1	1	1	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Information Security Basics:** Introduction to Information Security – Risk Analysis – Legal Issues – Secure Design – Policy, Standards, Procedures and Guidelines – Security Organization structure.

**Information Security Policy and Compliance:** Authentication and Authorization principles - Securing unstructured data – Information Rights Management – Storage security – Data base security.

**Secure Application:** Secure application design – Writing Secure Software – J2EE vulnerabilities

**Secure Infrastructure Management:** Security Operations Management – Disaster Recovery and Backups – Physical Security.

**Text Books/Reference Books/Online Resources:**

1. Information Security – The complete reference; Chapters: 1-9, 11-12, 26-28, 31, 32, and 34  
Author: Mark Rhodes – Ousley; McGraw Hill, 2013; ISBN Number: 978-0-07-178436-8

<b>Course Code:</b> <b>CS5224</b>	<b>Scripting languages for information security</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course, the student will be able to

<b>CO1</b>	Understand, analyze and build dynamic, interactive and secure web sites
<b>CO2</b>	Understand current and evolving Web languages for integrating media and user interaction in both front end and back end elements of a Web site
<b>CO3</b>	Analysis and reporting of web data and minimizing cyber risks
<b>CO4</b>	Applying different testing and debugging techniques and analyzing the web site effectiveness.
<b>CO5</b>	Applying different cyber security tools and scripting languages to mitigate frequent cyber attacks.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	-	-	2	1	2	1
<b>CO2</b>	1	1	-	-	2	-
<b>CO3</b>	2	-	2	1	3	1
<b>CO4</b>	1	3	-	1	2	3
<b>CO5</b>	2	1	1	-	3	1

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

**HTML:** Introduction to HTML, What is HTML, HTML Documents, Basic structure of an HTML document, Creating an HTML document, Mark up Tags, Heading-Paragraphs, Line Breaks, HTML Tags. Elements of HTML: Introduction to elements of HTML, Working with Text, Working with Lists, Tables and Frames, Working with Hyperlinks, Images and Multimedia, Working with Forms and controls.

**Java Script:** Introduction to JavaScript, Basic Syntax, Control Structures, Writing Functions, Working with Arrays, The Document Object Model, Events Handling, Client-side Validation, Form Validation & RegExps, ASP, Perl CGI, & Form Methods, SSI & Cookies, Frames & Windows, mimeTypeypes, plugins, & Java

**PHP:** PHP installation and Introduction, Loops String Functions in PHP, PHP Email Function, PHP Basics, Variables Arrays in PHP with Attributes Date & Time, Image, Uploading File handling in PHP Functions in PHP, Errors handling in PHP.

**Python:** Introduction to Python, Python basics, Data Types and variables Operators, Looping & Control Structure List, Modules Dictionaries, String Regular Expressions, Functions and Functional Programming, Object Oriented Linux Scripting Environment – Classes, Objects and OOPS concepts, File and Directory Access, Permissions and Controls Socket, Libraries and Functionality Programming, Servers and Clients Web Servers and Client scripting, Exploit Development techniques, Writing plugins in Python, Exploit analysis, Automation Process, Debugging basics, Task Automation with Python

**Perl & NodeJS:** Introduction to Perl – Overview of Perl Features, Getting and Installing Perl, Accessing Documentation via perldoc, HTML-Format Reference Documentation, Perl Strengths and Limitations, Security Issues in Perl Scripts. Introduction to Node.js; Events; Streams; Modules; Express; Socket.io; Persisting Data

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Identify issues related to environment, communication, protocols in wireless and mobile networks
<b>CO2</b>	Understand the functionalities of cellular networks and analyze the methods to improve capacity and coverage.
<b>CO3</b>	Analyze the performance of MAC protocols for wireless and mobile networks.
<b>CO4</b>	Evaluate the performance of different routing protocols
<b>CO5</b>	Analyze QoS and energy efficiency issues in resource constrained wireless and mobile environment.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2		2	2	2	
<b>CO2</b>	2		3	2	2	
<b>CO3</b>	2		3	2		
<b>CO4</b>	2		3	2	2	
<b>CO5</b>	2		2	2	2	

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Introduction to Mobile Networks, Wireless Communication Fundamentals, Multi-hop Communication, Impact of mobility.

Cellular networks: Introduction, Frequency Reuse, Channel Assignment Strategies, Handoff Strategy, Interference and system capacity, Improving coverage and capacity.

Medium Access Control: MACA, MACAW, Wireless LAN.

Wireless Sensor Networks (WSN) MAC Protocols: Issues in designing MAC protocols for adhoc wireless networks, design goals, classification of MAC protocols, MAC protocols for sensor network, location discovery, S-MAC, IEEE 802.15.4.

Routing in Mobile Ad hoc Networks (MANET): Ad-hoc On-Demand Distance Vector Routing Protocol (AODV), Dynamic Source Routing (DSR), Secure routing protocols in MANET.

WSN Routing Protocols: Issues in designing a routing protocol, classification of routing protocols, table-driven, on-demand, hybrid, flooding, hierarchical, and power aware routing protocols, WSN Localization methods, Sensor Deployment Strategies, QoS and Energy Management, Underwater sensor networks communication .

5G Architecture: Software Defined Networking – Network Function Virtualization – Basics about RAN Architecture –High-Level Requirements for 5G Architecture – Functional Architecture and 5G Flexibility

#### Text Books/Reference Books/Online Resources:

4. Feng Zhao and Leonides Guibas, "Wireless sensor networks ", Elsevier publication - 2004.
5. C. Siva Ram Murthy, and B. S. Manoj, "AdHoc Wireless networks ", Pearson Education - 2008.
6. Asif Oseiran, Jose F.Monsserrat and Patrick Marsch, "5G Mobile and Wireless Communications Technology", Cambridge University Press, 2016.

<b>Course Code:</b> <b>CS5205</b>	<b>Cryptography Laboratory</b>	<b>Credits</b> <b>0-1-2: 2</b>
--------------------------------------	--------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Implement and analyze the number theoretic algorithms.
<b>CO2</b>	Assess attacks including brute force attacks on symmetric key encryption protocols
<b>CO3</b>	Implement number theoretic algorithms using multi-precision integer package.
<b>CO4</b>	Implement Public Key Cryptosystems and analyze their security.
<b>CO5</b>	Implementation of Elliptic Curve Cryptosystem

**Course Articulation Matrix:**

Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6
<b>CO1</b>	1		1			
<b>CO2</b>	3		2	1	1	1
<b>CO3</b>	1		1			
<b>CO4</b>	2		2	3	3	2
<b>CO5</b>	2		1	3	2	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Programming Assignment Set 1:**

- Euclidean and Extended Euclidean algorithm for finding the Greatest Common Divisor of two large integers. Computing the Multiplicative inverses in  $Z_n$ .
- Repeated square and multiply algorithm for modular exponentiation in  $Z_n$ .
- Determining the order of a group element. Finding a generator of a cyclic group.
- Chinese remainder theorem.
- Computation of Legendre symbol and Jacobi symbol
- Modular polynomial arithmetic
- RSA public key algorithm
- ElGamal Cryptosystem
- Rabin cryptosystem
- Diffie-Hellman Key exchange protocol.

**Programming Assignment Set II:**

- Pollard's rho algorithm for factoring integers.
- Pollard's  $p-1$  algorithm for factoring integers.
- Fermat's factorization method
- Congruence of squares. Finding a congruence of squares modulo  $n$  to factor  $n$ .
- Construction of Finite Field of characteristic 2.
- Computations in elliptic curve over a finite field.

**Programming Assignment Set III:**

- a. Sieve of Eratosthenes
- b. Fermat primality test
- c. Solovay-Strassen probabilistic primality test
- d. Miller-Rabin probabilistic primality test
- e. Lucas-Lehmer primality test

**Instructions:**

1. C/C++ Programming Language under Linux Operating System
2. gmp-man-6.1.2.pdf (Refer GMP library manual)
3. Code should be well modularised and documented
4. Use the standard coding style

**Text Books/Reference Books/Online Resources:**

1. Menezes, P.C. van Oorschot, S.A. Vanstone: *Handbook of Applied Cryptography*. CRC Press, 1996.
2. Abhijit Das and C.E.VeniMadhavan, *Public-key Cryptography: Theory and Practice*, Pearson, 2009.
3. Darrel Hankerson, Alfred Menezes, Scott Vanstone, *Guide to Elliptic Curve Cryptography*, Springer-Verlag, 2004.

<b>Course Code:</b> <b>CS5206</b>	<b>Web &amp; Database Security Laboratory</b>	<b>Credits</b> <b>0-1-2: 2</b>
--------------------------------------	-----------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Design of access control methods for secure web & database application development
<b>CO2</b>	Analyse and Classify the vulnerabilities in the Web and Database applications.
<b>CO3</b>	Design & implementation various methods for web & database intrusion detection
<b>CO4</b>	Design and Implementation security audit methods

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2	1	1	2		1
<b>CO2</b>	1	1	2	1		1
<b>CO3</b>	1	1	1		1	1
<b>CO4</b>	1	1		1		2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

1. Creation and manipulation of database using SQL scripts and graphical interfaces.
2. Implementing DAC: Implementation of database security policies using DAC in oracle 10g/SQL server
3. Implementing of MAC to ensure confidentiality and control information flow using either Oracle 10g or SQL server. This provides exposure to understand the concepts of MAC and Trojan horse
4. Implementation of Virtual Private Database using View using Oracle 10g or SQL server
5. Design a method to simulate the HTML injections and cross-site scripting (XSS) to exploit the attackers.
6. Determine HTML injection bugs and possible measures to prevent HTML injection exploits.
7. Implement Secure coding for buffer flow heap attacks.
8. Implementation of Design methods to break authentication schemes
9. Implementation of methods for abusing Design Deficiencies against web sites

<b>Course Code:</b> <b>CS5248</b>	<b>SEMINAR-I</b>	<b>Credits</b> <b>0-0-2: 1</b>
--------------------------------------	------------------	-----------------------------------

Pre-Requisites: None

**Course Outcomes:**

At the end of the course, the student will be able to

<b>CO1</b>	Analyze the selected topic, organize the content and communication to audience in an effective manner
<b>CO2</b>	Practice the learning by self study

**Course Articulation Matrix:**

	<b>PO 1</b>	<b>PO 2</b>	<b>PO 3</b>	<b>PO 4</b>	<b>PO 5</b>	<b>PO 6</b>
<b>CO1</b>	2	3	1	1		
<b>CO2</b>	2	3	1	1		

1 - Slightly;      2 - Moderately;      3 – Substantially

<b>Course Code:</b> <b>CS5251</b>	<b>Network Security</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-------------------------	-----------------------------------

Pre-requisites: Foundations of Cryptography

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Design adversary models and protocols
<b>CO2</b>	Design of secure communication protocols in Internet applications.
<b>CO3</b>	Analyze cryptographic algorithms
<b>CO4</b>	Identify security threats in Mobile Applications.
<b>CO5</b>	Design of secure protocols for wireless ad-hoc and sensor networks.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>			1	2		2
<b>CO2</b>			2	3		
<b>CO3</b>				2		3
<b>CO4</b>	2			2		2
<b>CO5</b>				3		2

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Cryptographic algorithms, Pseudorandom Generators, Hash functions, Block ciphers, Stream Ciphers, Access Control Methods, Message Authentication and Digital Signatures, Design of secure Internet protocols, Key distributions, Design of Access control methods, Network Anomaly Detection methods, Mobile IPv6, https protocol, Design of Firewalls and Intrusion Detection Systems, Malware detection methods, Mobile application security models, Mobile threats and malware, Trust based protocols, Mobile app security, Vulnerabilities and Security Challenges in Wireless networks, Trust Assumptions, Adversary models and Protocols, Attacks against naming and addressing in the Internet, Security protocols for address resolution and address auto configuration, IP Security (IP Sec) protocol, Key Establishment and Revocation Protocols, Secure Neighbor Discovery, Secure routing protocols in multi-hop wireless networks, Provable Security for Ad-hoc Network routing protocols, Privacy preserving routing in Ad-hoc Networks, Location privacy in vehicular Ad-hoc networks.

**Text Books/Reference Books/Online Resources:**

<b>Course Code:</b> <b>CS5252</b>	<b>Data Privacy</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	---------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Define differential privacy
<b>CO2</b>	Design techniques to achieve differential privacy for linear queries.
<b>CO3</b>	Design mechanisms for query release problem using online learning algorithms.
<b>CO4</b>	Analyze computational complexity of differentially private mechanisms

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2	2	2	2	2	2
<b>CO2</b>	1	3	3	3	3	3
<b>CO3</b>	1	2	3	3	3	3
<b>CO4</b>	1	3	3	3	3	2

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

The Promise of Differential Privacy: Privacy-preserving data analysis; Basic Terms: The model of computation, Towards defining private data analysis, Formalizing differential privacy; Basic Techniques and Composition Theorems: Useful probabilistic tools, Randomized response, The laplace mechanism, The exponential mechanism, Composition theorems, The sparse vector technique; Releasing Linear Queries with Correlated Error: An offline algorithm: SmallDB, An online mechanism: private multiplicative weights; Generalizations: Mechanisms via  $\alpha$ -nets, The iterative construction mechanism, Connections; Boosting for Queries: The boosting for queries algorithm, Base synopsis generators; When Worst-Case Sensitivity is Atypical: Subsample and aggregate, Propose-test-Release, Stability and privacy; Lower Bounds and Separation Results: Reconstruction attacks, Lower bounds for differential privacy; Differential Privacy and Computational Complexity: Polynomial time curators, Some hard-to-Synthesize distributions, Polynomial time adversaries; Differential Privacy and Mechanism Design: Differential privacy as a solution concept, Differential privacy as a tool in mechanism design, Mechanism design for privacy aware agents; Differential Privacy and Machine Learning: The sample complexity of

differentially private machine learning, Differentially private online learning, Empirical risk minimization; Additional Models: The local model, Pan-private streaming model, Continual observation, Average case error for query release.

3. Relevant Research Papers

<b>Course Code:</b> <b>CS5152</b>	<b>Deep Learning</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	----------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Identify Convolutional Neural Networks models to solve Supervised Learning Problems
<b>CO2</b>	Design Autoencoders to solve Unsupervised Learning problems
<b>CO3</b>	Use BiLSTM Networks for time series analysis classification problems.
<b>CO4</b>	Apply Classical Supervised Tasks for Image Denoising, Segmentation and Object detection problems.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	3	2	1	2	1	2
<b>CO2</b>	2	1	2	2	3	1
<b>CO3</b>	2	1	2	2	3	3
<b>CO4</b>	1	2	3	2	3	3

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Introduction to Biological Neurons, Artificial Neural Networks, McCulloch Pitts Neuron, Learning processes, Perceptron, Perceptron convergence theorem, XOR problem, Multilayer perceptron, Back Propagation Learning, Activation functions, loss functions, Radial Basis Functions. Introduction to Self Organizing Maps; Optimizers: Gradient Descent (GD), Batch Optimization, Momentum Based GD, Stochastic GD, AdaGrad, RMSProp, Adam; Sequence to sequence models, LSTM, BiLSTM, BERT, SciBERT, BioBERT for NLP Applications; Convolutional Neural Network, Building blocks of CNN, Transfer Learning; Regularization: Bias Variance Tradeoff, L2 regularization, Early stopping, Dataset augmentation, Parameter sharing and tying, Dropout; Autoencoders : Unsupervised Learning with Deep Network, Autoencoders, Stacked, Sparse, Denoising Autoencoders, Variational Autoencoders; Recent Trends in Deep Learning Architectures, Residual Network, Skip Connection Network, DensenNet, InceptionNets, SqueezerNet, MobileNet, NasNet, HRnet Models; Classical Supervised Tasks with Deep Learning, Segmentation: ResUnet, SegNet, Mask RCNN models, Object Localization: FastRCNN, Faster RCNN, SSD with Applications; Attention Mechanism, Attention Models in Vision; Image Captioning, Visual QA, Visual Dialog, Transformer, Generative Adversarial Network on Image, CycleGANs, Progressive GANs, StackGANs, Unet GAN, vision and NLP Applications.

**Text Books/Reference Books/Online Resources:**

2. Christopher Bishop, *Pattern Recognition and Machine Learning*, Springer, 2006.
3. Simon Haykin, "Neural Networks, A Comprehensive Foundation", 2nd Edition, Addison Wesley Longman, 2001.

<b>Course Code:</b> <b>CS5261</b>	<b>Foundations of Block Chain Technology</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	----------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand how blockchain work, including private and public platforms
<b>CO2</b>	Understand the technical underpinnings of blockchain technology at sufficient depth to perform analysis.
<b>CO3</b>	Apply various blockchain concepts to analyse examples, proposals, case studies, and preliminary blockchain system design discussions.
<b>CO4</b>	Know and be able to apply the concepts, tools, and frameworks for building blockchain decentralized applications.
<b>CO5</b>	Design secure smart contract applications on blockchain.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2	2	2	2	2	2
<b>CO2</b>	1	3	3	3	3	3
<b>CO3</b>	1	2	3	3	3	3
<b>CO4</b>	1	3	3	3	3	2
<b>CO5</b>	3	2	3	3	3	3

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Blockchain technology Introduction, Concepts of Blockchain Systems, Key Problem Challenges and Solutions, Bitcoin Concept- Merkle Tree - hardness of mining - transaction verifiability - anonymity, Attacks on Bitcoin- Double-spend attacks, Selfish mining, Security of Transactions in Bitcoin, Privacy in Bitcoin, Cryptographic Primitives in Blockchain- Cryptosystems in practice, Cryptographic Hash Functions, Digital Signatures-Aggregate Signature, Threshold Signature Blockchain Platforms - Blockchain-Ethereum, Smart Contracts - Attacks on smart contracts, Permissioned Blockchain – Hyperledger, Blockchain Applications & Use Cases, Consensus Protocols- The consensus problem- Byzantine Generals problem, Asynchronous Byzantine Agreement, Consensus mechanisms used in Bitcoin Blockchain, Ethereum Blockchain and Hyperledger Blockchain, Blockchain (BoT)-

Advantages of integrating Blockchain to IoT, Trust Building, Cost Reduction, Accelerate Data Exchanges, Scaled Security for IoT,

<b>CO4</b>	2	1	2	3	2	2
<b>CO5</b>	1	1	2	2	3	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Models of Secure Computation, Defining Secure Computation: Computational/statistical Indistinguishability, Real-Ideal World or Simulation-based Security notions. Secure computation with semi-honest security: Honest-majority Setting: Secret Sharing, BenOr-Goldwasser-Wigderson (BGW) Construction, Optimizations (MPC in preprocessing mode and circuit randomization), Cramer-Damgaard-Neilsen (CDN) Construction. Dishonest majority Setting: Oblivious Transfers (OT), two-party Goldreich-Micali-Wigderson (GMW) construction, Optimizations of GMW (Random input OT and OT extension), Yao construction, BMR construction and multi-party GMW construction. Secure computation with Active security: Honest Majority Setting. Verifiable Secret Sharing, BGW Construction with active security, Hyper-invertible Matrices and Beaverliva-Hirt (BH) Construction, Information Checking Protocol. Dishonest majority Setting: Commitment Schemes, Zero-knowledge, GMW Compiler for active corruption, Cut-and-Choose OT and Lindell-Pinkas Construction.

Broadcast & Byzantine Agreement (BA): Impossibility results. Dolev-Strong (DS) Broadcast, Exponential Information Gathering (EIG) construction for BA, Berman-Garay-Perry (BGP) construction for BA. Multi-valued Broadcast and BA. Secure Set Intersection, Privacy Preserving Biometrics & Genomics, Secure Cloud Computing

<b>Course Code:</b> <b>CS5266</b>	<b>Research study on Information Security</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Comprehend popular techniques in the chosen area of research.
<b>CO2</b>	Relate some technological problems to the research areas.
<b>CO3</b>	Justify the approaches to the problems.
<b>CO4</b>	Write survey paper.
<b>CO5</b>	Revise some method in the concerned domain for better solution.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1	3	1			1
<b>CO2</b>	1	2	1			1
<b>CO3</b>	1	1	1			1
<b>CO4</b>		2	1			1
<b>CO5</b>		2	1			3

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Research Monographs, Articles, Papers as prescribed by the faculty.

<b>Course Code:</b> <b>CS5267</b>	<b>Network Coding</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand the Network Coding Theorem, Finite Fields and Polynomials
<b>CO2</b>	Develop Network Codes to handle noise and attacks
<b>CO3</b>	Analyze the network codes for robustness
<b>CO4</b>	Apply Network Coding to storage systems

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1					
<b>CO2</b>	1		1	2	2	2
<b>CO3</b>	1			2	2	2
<b>CO4</b>	1			1	1	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Single-Source Multicast Problem, Main Network Coding Theorem, Finite Fields and Polynomials, Algebraic Network Coding, Random Network Coding, non-Multicast Scenarios, Practical NC, NC in P2P, Practical NC Avalanche, RNC in P2P, Analysis of NC and P2P, Avalanche analysis, Index Coding, ANC, WNC, LP framework, Inter-session Coding, Multiple Unicasts, Alignment, Intro to Pollution Attacks, Homomorphic tags (Anh), Null Keys, Subspace properties, NC Storage

**Text Books/Reference Books/Online Resources:**

1. C. Fragouli and E. Soljanin, *Network Coding Applications*, Now Publishers, Available online, <http://www.nowpublishers.com/article/Details/NET-013>, 2007
2. M. Medard and A. Sprintson, *Network Coding: Fundamentals and Applications*, Academic Press, 2012.
3. T. Ho and D. S. Lun, *Network Coding: An Introduction*, Cambridge University Press, Cambridge, U.K., April 2008.

<b>Course Code:</b> <b>CS5268</b>	<b>Public Key Infrastructure and Trust Management</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analyze Core PKI services: Authentication, Integrity, and confidentiality
<b>CO2</b>	Design Certificates using Trust Models , PKI Considerations and Electronic Legislation
<b>CO3</b>	Identify PKIX standardization Requirements
<b>CO4</b>	Distinguish Public key certificate management models
<b>CO5</b>	Apply Cryptographic Applications

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1	1	1	1	1	1
<b>CO2</b>	2		2	2	2	2
<b>CO3</b>	1		1	1		1
<b>CO4</b>	1	1	1	1	1	1
<b>CO5</b>		1	1	2	1	2

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

**Introduction – services offered by PKI- components of a fully functional PKI :**

Certification authority, Certificate repository, Certificate revocation, Key backup and recovery, Automatic key update, Key history management, Cross-certification, Support for non-repudiation, Time stamping, Client software

**PKI architectures** – Single CA, Hierarchical PKI, Mesh PKI, Trust Lists, Bridge CAs

**PKI standards** : X.509: Components of X.509: Tamper evident envelope, Basic certificate contents, certificate extensions.; PGP: Web of Trust; Simple PKI (SPKI) / Simple Distributed Security Infrastructure (SDSI): Representing certificates in terms of S-Expressions- Certificate

Chain Discovery - Distinct Advantages of SPKI/SDSI over X.509. PKI application : Smart card integration with PKI's

**Access Control Mechanisms:** Discretionary Access Control (DAC) – Mandatory Access Control (MAC) – Role Based Access Control (RBAC). Issues : Revocation- Anonymity-Privacy issues

**Trust Management:** Policy based Trust Management System- Social network based Trust Management System- Reputation based Trust Management System (DMRep, EigenRep, P2Prep)- Framework for Trust Establishment. Risks Impact on E-Commerce and E-Business: Information Risk – Technology Business Risk

**Text Books/Reference Books/Online Resources:**

1. Desmedt, Yvo G. (Ed.), *Secure Public Key Infrastructure Standards, PGP and Beyond*, Springer, 2012.
2. J. Camenisch and C. Lambrinoudakis, *Public Key Infrastructures, Services and Applications*, EuroPKI 2010.

<b>Course Code:</b> <b>CS5269</b>	<b>Cyber Laws and Intellectual Property Rights</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	----------------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand cyberspace, issues there in and need for a cyber law
<b>CO2</b>	Understand facets of India IT act n addressing e-trade and e-governance
<b>CO3</b>	Understanding of issues and problems arising out of online transactions
<b>CO4</b>	Understanding crimes with case law
<b>CO5</b>	Understand of intellectual property issues and development of the law in this regard

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>		2	1	1		2
<b>CO2</b>		2	1			2
<b>CO3</b>		2	1	1		2
<b>CO4</b>		2	2			2
<b>CO5</b>		2	1	1		2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Cyber Space- Fundamental definitions -Interface of Technology and Law – Jurisprudence and-Jurisdiction in Cyber Space - Indian Context of Jurisdiction -Enforcement agencies – Need for IT act - UNCITRAL – E- Commerce basics; Information Technology Act, 2000 - Aims and Objects — Overview of the Act – Jurisdiction -Electronic; Governance – Legal Recognition of Electronic Records and Electronic Evidence - Digital Signature Certificates - Securing Electronic records and secure digital signatures - Duties of Subscribers - Role of Certifying Authorities - Regulators under the Act -The Cyber Regulations Appellate Tribunal - Internet Service Providers and their Liability– Powers of Police under the Act – Impact of the Act on other Laws; Cyber Crimes -Meaning of Cyber Crimes –Different Kinds of Cyber crimes – Cyber crimes under IPC; Cr.P.C and Indian Evidence Law - Cyber crimes under the Information Technology Act,2000 - Cyber crimes under International Law - Hacking Child Pornography, Cyber Stalking, Denial of service Attack, Virus Dissemination, Software Piracy, Internet Relay Chat (IRC) Crime, Credit Card Fraud, Net Extortion, Phishing etc - Cyber

Terrorism- Violation of Privacy on Internet - Data Protection and Privacy – Indian Court cases; Intellectual Property Rights – Copyrights- Software – Copyrights vs Patents debate - Authorship and Assignment Issues - Copyright in Internet - Multimedia and Copyright issues - Software Piracy - Trademarks - Trademarks in Internet – Copyright and Trademark cases, Patents - Understanding Patents - European Position on Computer related Patents, Legal position on Computer related Patents - Indian Position on Patents – Case Law, Domain names -registration - Domain Name Disputes-Cyber Squatting-IPR cases

**Text Books/Reference Books/Online Resources:**

1. Justice Yatindra Singh, *Cyber Laws*, Universal Law Publishing Co., New Delhi, 2010
2. Farooq Ahmed, *Cyber Law in India*, New Era publications, New Delhi, 2005
3. S.R.Myneni, *Information Technology Law(Cyber Laws)*, Asia Law House, Hyderabad, 2014
4. Chris Reed, *Internet Law-Text and Materials*, Cambridge University Press, 2004
5. Pavan Duggal, *Cyber Law- the Indian perspective*, Universal Law Publishing Co., New Delhi, 2004

<b>Course Code:</b> <b>CS5270</b>	<b>Algorithmic Coding Theory</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	----------------------------------	-----------------------------------

Pre-requisites: Advanced Algorithms and Foundations of Cryptography

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand Shannon's noisy coding theorem, Shannon capacity and entropy
<b>CO2</b>	Design of error correcting codes and decoding algorithms
<b>CO3</b>	Design and Analysis of light weight and code-based cryptosystems
<b>CO4</b>	Design of network coding algorithms for communication networks

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
CO1	2		2			
CO2	3		2	2	2	3
CO3	2		2	3	2	3
CO4	3		2	3	2	3

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Shannon Theorem, Shannon capacity, Hamming's Theory, Error correcting codes, Linear codes, Impossibility results for codes, Mac Williams Identities, Linear programming bound, The asymptotic perspective, Encoding, Decoding from erasures, Decoding RS codes, List decoding, linear time decoding, LDPC codes, Sipser-Spielman codes, Linear time encoding and decoding, Linear time and near optimal error decoding, Expander based constructions of efficiently decodable codes, Some NP hard coding theoretic problems, Applications in complexity theory, Cryptography with error correcting codes, Lossless Multicast Network Coding, Network coding in Lossy Networks, Security against adversarial errors, Error correction bounds for centralized network coding.

**Text Books/Reference Books/Online Resources:**

2. John b. Anderson and Seshadri Mohan, *Source and Channel Coding: An Algorithm Approach*, Springer, 1991.
3. G. Kabatiansky, E. Krouk and S. Semenov, *Error Correcting Coding and Security for Data Networks*, John Wiley & Sons Ltd., 2005.
4. Jiri Adamek, *Foundations of Coding*, Wiley Interscience Publication, John Wiley & Sons, 1991

<b>Course Code:</b> <b>CS5271</b>	<b>Digital Forensics</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	--------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand the need for digital forensics
<b>CO2</b>	Identify different technologies for digital forensics
<b>CO3</b>	Understand different investigation methodologies
<b>CO4</b>	Apply the digital forensics for different fields.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>				1	1	1
<b>CO2</b>	1			2	1	1
<b>CO3</b>				2	2	1
<b>CO4</b>	2		1	2	1	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Information formats, PC hardware, Disc geometry, File system, Electronic organizers. Forensic analysis – Investigative Methodology: Forensic Analysis, Electronic Discovery, Intrusion Investigation. Technology: Windows Forensic Analysis, UNIX Forensic Analysis, Embedded Systems Analysis, Mobile Network Investigations. Intrusion Investigation, Analysis tools, Financial forensics.

**Text Books/Reference Books/Online Resources:**

1. Sammes T, B. Jenkinson, *Forensic Computing*, Springer, 2007.
2. Eoghan Casey. Ed., *Handbook of Digital Forensics and Investigation*, Academic Press, 2010.

<b>Course Code:</b> <b>CS5272</b>	<b>Secure Dependable and Distributed Computing</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	--------------------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand secure development processes in distributed systems
<b>CO2</b>	Modeling threats and vulnerabilities for host, network, resident code, storage, grid and applications in distributed computing
<b>CO3</b>	Designing architectures for security services in distributed computing
<b>CO4</b>	Applying security models for distributed systems

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>				1	2	1
<b>CO2</b>	2		2	2	2	2
<b>CO3</b>	1		1	2	2	2
<b>CO4</b>	1		1	2	2	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Distributed Systems Security, Secure Development Lifecycle Processes - A Typical Security Engineering Process - Security; Engineering Guidelines and Resources. Common Security Issues and Technologies: Security, Issues, Common Security Techniques; Host-level Threats and Vulnerabilities: Transient code Vulnerabilities - Resident Code; Vulnerabilities - Malware: Trojan Horse – Spyware - Worms/Viruses – Eavesdropping - Job; Faults. Infrastructure-Level Threats and Vulnerabilities: Network-Level Threats and Vulnerabilities - Grid Computing Threats and Vulnerabilities – Storage Threats and Vulnerabilities – Overview of Infrastructure Threats and Vulnerabilities; Application-Level Threats and Vulnerabilities: Application-Layer Vulnerabilities -Injection, Vulnerabilities - Cross-Site Scripting (XSS) - Improper Session Management - Improper Error Handling - Improper Use of Cryptography - Insecure Configuration Issues - Denial of Service - Canonical Representation Flaws - Overflow Issues; Service-Level Threats and Vulnerabilities: SOA and Role of Standards - Service-Level Security Requirements - Service-Level Threats and Vulnerabilities - Service-

Level Attacks - Services Threat Profile; Host-Level Solutions: Sandboxing – Virtualization - Resource Management - Proof-Carrying Code -Memory Firewall – Antimalware. Infrastructure-Level Solutions: Network-Level Solutions - Grid-Level Solutions - Storage-Level Solutions; Application-Level Solutions: Application-Level Security Solutions; Service-Level Solutions: Services Security Policy - SOA Security Standards Stack – Standards, Deployment Architectures for SOA Security - Managing Service-Level Threats; Future Directions - Cloud Computing Security – Security Appliances, Dependability concepts - Faults and Failures – Redundancy – Reliability – Availability – Safety – Security – Timeliness - Fault-classification - Fault-detection and location - Fault containment, Byzantine failures - Fault injection - Fault-tolerant techniques - Performability metrics, Fault-tolerance in real-time systems - Space- time tradeoff - Fault-tolerant techniques (N-version programming - Recovery block - Imprecise computation; (m,k)- deadline model) - Adaptive fault-tolerance - Fault detection and location in real-time systems. Security Engineering – Protocols - Hardware protection - Cryptography – Introduction – The Random Oracle model –Symmetric Crypto- primitives – modes of operations – Hash functions – Asymmetric crypto primitives; Distributed systems - Concurrency - fault tolerance and failure recovery – Naming. Multilevel Security – Security policy model – The Bell Lapadula security policy model – Examples of Multilevel secure system – Broader implementation of multilevel security system. Multilateral security – Introduction – Comparison of Chinese wall and the BMA model – Inference Control – The residual problem; Nuclear Command and control – Introduction – The Kennedy memorandum – unconditionally secure authentication codes – shared control security – tamper resistance and PAL – Treaty verification. Security printing and seals – Introduction – History – Security printing – packaging and seals – systemic vulnerability – evaluation methodology.

<b>Course Code:</b> <b>CS5273</b>	<b>Data Hiding</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	--------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Identify techniques for data hiding
<b>CO2</b>	Analyse models of watermarking
<b>CO3</b>	Identify different types of attacks
<b>CO4</b>	Apply data hiding techniques into different domains
<b>CO5</b>	Apply the data hiding techniques in digital rights management

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1	1		2		2
<b>CO2</b>	1			2		2
<b>CO3</b>	1	1		2		1
<b>CO4</b>		1	2	1		1
<b>CO5</b>		2	2	2		1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Introduction: data hiding models, security and privacy aspects, techniques for hiding data- Digital audio, video, images and text. Steganography: Introduction, how it is different from cryptography, Classification of steganography algorithms: Transform-based, spatial domain, statistical, other, Applications of steganography: Covert channels, audio data, military, e-commerce. Watermarking: Introduction, how it is different from steganography and cryptography, watermarking algorithms, watermarking applications, limitations in watermarking. Digital rights management issues: e-commerce, copyright protection, intellectual property. Issues, digital signatures, authentication, case studies, business models. Multimedia security and information assurance, visual cryptography, key management;

Attacks and benchmarks for data hiding systems; Applications of data hiding technology in medicine, law enforcement, remote sensing, and e-commerce, Software for digital data hiding

**Text Books/Reference Books/Online Resources:**

2. Michael T. Raggio and Chet Hosmer, *Data Hiding: Exposing Concealed Data in Multimedia, Operating Systems, Mobile Devices and Network Protocols*, 1st Edition, Syngress, 2012

<b>Course Code:</b> <b>CS5274</b>	<b>Identity Based Cryptography</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	------------------------------------	-----------------------------------

Pre-requisites: Foundations of Cryptography, Advanced Algorithms

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Analysesecurity models for IBE and HIBE
<b>CO2</b>	Design CCA- secure IBE and HIBE
<b>CO3</b>	Develop algorithms for IBE without Pairing
<b>CO4</b>	Develop algorithms for Signature Schemes, Key agreement, Broadcast Encryption
<b>CO5</b>	Develop algorithms for Certificate and certificate less encryption

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1		1	1		1
<b>CO2</b>	2		1	2		2
<b>CO3</b>	2	1	1	2		2
<b>CO4</b>	2	1	2	2		2
<b>CO5</b>	2	1	2	2		2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Public key encryption, Security Models for IBE – CCA, CPA, Selective-ID Model, Anonymous (H)IBE, Random Oracles, Finite fields, Elliptic Curves and Pairing, Hardness Assumptions , Boneh-Franklin IBE – Hierarchical IBE, CPA security, Selective identity model, Canetti-Halevi-Katz Transformation, The Boyen- Mei-Waters Transformation, Constant size HIBE, Security analysis against Adaptive chosen cipher text attacks, Adaptive Identity Model without Random Oracle - Boneh-Boyen IBE, Generalisation of Waters IBE, Converting to a CCA-Secure HIBE, Dual System Encryption, IBE without Pairing - IBE Based on Number Theory, IBE From Lattices, Applications – Signature Schemes, Key agreement, Broadcast Encryption; Certificate and certificate less encryption, Avoiding Key Escrow.

2. Marc Joye and G. Neven, *Identity Based Cryptography*, IOS Press, 2009.

<b>Course Code:</b> <b>CS5275</b>	<b>Information Security Risk Management</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	---------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand risk-planning and risk management of computer and information systems.
<b>CO2</b>	Apply vulnerability assessment for natural disaster
<b>CO3</b>	Analyzing the implications of emergency response
<b>CO4</b>	Design methods for risk mitigation for infrastructure

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1		1	1	1	1
<b>CO2</b>	2		1	2		2
<b>CO3</b>	1			1		1
<b>CO4</b>	2		2	2	1	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Development of concepts required for risk-based planning and risk management of computer and information systems (Risk analysis, risk perception, Communicating risk, risk mitigation); Objectives and methods for vulnerability assessment for natural disaster, technological hazards, and terrorist threats; implications for emergency response, vulnerability of critical infrastructures;

**Text Books/Reference Books/Online Resources:**

<b>Course Code:</b> <b>CS5276</b>	<b>Privacy Enhancing Technologies</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	---------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>				1		1
<b>CO2</b>	2		2	3	1	2
<b>CO3</b>	2	2	2	3	1	2
<b>CO4</b>	2		2	3	1	2

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Major issues in computer security related to protecting privacy, threats to the privacy of computer users; Private communications, anonymous communications, censorship circumvention and traffic analysis; Private authentication, selective disclosure credentials for identify management, and zero-knowledge proof techniques; Private statistics and computations through homomorphic encryption and secure multi-party computation and differential privacy; Privacy threats such as pervasive surveillance, profiling, location analysis, and traffic analysis, as well as the technical mitigation techniques relying on modern cryptography and differential privacy; Standard threats to on-line privacy such as profiling, and location analysis; Methods to mitigate abuses arising from anonymous communication, while preserving privacy, through the use of private authentication, and selective disclosure credentials that can be used to build digital cash systems; Zero-knowledge proofs and their use as building blocks of privacy enhancing technologies; Problem of computing on private data using simple homomorphic encryption schemes as well as modern secure multi-party computation techniques; Statistical disclosure control, ad-hoc techniques for analysis and techniques based on differential privacy.

3. Note: Selected research papers are also be given time to time.

<b>Course Code:</b> <b>CS5277</b>	<b>Security of E-Based Systems</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Propose protocols for e-based systems
<b>CO2</b>	Test the protocols using tools
<b>CO3</b>	Analyze the e-based systems and identify the issues
<b>CO4</b>	Understand fundamentals of authentication protocols

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2		1	2	1	2
<b>CO2</b>				2		2
<b>CO3</b>	1		1	2		2
<b>CO4</b>	1			1		1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Introduction to e-security, Security services, Security attacks, Threats and vulnerabilities, Basics of protection, Security management, Security policies, Protections of users and networks, Protection of employees of networks, Security planning, Risk analysis, Security plans, Legal issues in system security. Symmetric encryption, Public key cryptosystems, Trapdoor function model, Conventional public key encryption, Public key management, Attacks against public key cryptosystems, The PKIX architecture model, PKIX management functions, Public key certificates, Trust hierarchical models, Bridge certification authority architecture, Deploying the enterprise's PKI, Weak and Strong authentication schemes, Attacks on authentication, Digital signature frameworks, Authentication applications, X.509 Authentication service, Kerberos service, IP authentication header protocol, Authentication in wireless networks. Trust management in communication networks, Delegation of trust, Digital credentials, Authorization and access control systems. Basic technologies for e-services, E-services security, E-government: concepts and practices, Egovernment assets, Challenges, limits, and obstacles to e-government, Authentication in e- government, Privacy in e-government, Monitoring e-government security.

<b>Course Code:</b> <b>CS5278</b>	<b>Secure Group Communications</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Identify challenges and factors enabling secure group communication
<b>CO2</b>	Analyse group key managements schemes
<b>CO3</b>	Analyse centralized group key distribution schemes
<b>CO4</b>	Analyse dynamic conference schemes and hierarchical Access Control
<b>CO5</b>	Apply group key management techniques to mobile networks

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1			1	1	1
<b>CO2</b>	2		1	2	3	2
<b>CO3</b>	2		1	2	3	2
<b>CO4</b>	2		1	2	3	2
<b>CO5</b>	2		2	3	3	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Introduction - Overview of Secure group communications, Preliminaries, Enabling Technologies, Group Dynamics and Security; Group Key Management Schemes – Classification of Typical Group Key Management Schemes, Public Key Based Secure Group Communication Schemes – RPS and STB, Secret Key Based Secure Group Communication Schemes – CBT, Iolus, and DEP, Group Key Management Based on Hierarchical Clusters, N-Party Diffie Hellman Key Exchange suites – ING, BD and GDH protocols; Tree Based Key Management Schemes – Centralized Key Distribution based on Tree Structure – Key Tree, Bursty behavior and its implementation, d-ary key tree, OFT, OFC, Collusion attacks on OFT and its improvement, Distributed Key Agreement based on Tree structure – TGDH, BF-TGDH, DISEC; Dynamic Conferencing Schemes (DCS) – Introduction and a Naïve solution, Public-Key based DCS (PKDCS), Chinese Remainder Theorem based DCS, Symmetric Polynomial

based DCS, Tree based DCS, BF-TGDH based DCS; Secure Group Communications with Hierarchical Access Control – Classification, Unconditionally Secure Keying Schemes for HAC, One Way function Schemes for HAC, Index based Schemes for SGC with HAC, CRT based Schemes for SGC with HAC; SGC Challenges – Factors enabling SGC functionality, admission control and membership management, message/packet source authentication, Coordination, Broadcast authentication; SGC for Wireless and mobile Networks – Topology matching key management, Key management for TMKM, Admission scoped key management, SGC over adhoc networks.

<b>Course Code:</b> <b>CS5279</b>	<b>Cyber Crime and Information Warfare</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	--------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand principles of cyber crime and cyber forensics.
<b>CO2</b>	Verify cryptography techniques using Cryptool
<b>CO3</b>	Apply appropriate countermeasures to defend threats
<b>CO4</b>	Apply suitable forensic tools for forensic analysis
<b>CO5</b>	Understand social and web intelligence in era of information age.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1					
<b>CO2</b>				1		1
<b>CO3</b>	1		1	2	1	2
<b>CO4</b>	1		1	2	1	2
<b>CO5</b>	2		2	2		2

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

**Cyber Crime:** Industrial espionage and cyber-terrorism, principles of criminal law, computer forensic investigation, elements of personnel security and investigations, principles of risk and security management, conspiracy in computer crime, and computer fraud investigation.

**Introduction to Cyber Forensics:** Computer Forensics and the law, Private & Public sector workplace practices, Cyber Crime examples: Defacements, DoS, Credit Card theft, Silent intrusion, internal attacks, investigative actions, Forensics analysis investigative action, Computer Forensic tools.

**Information Warfare:** Nature of information warfare including computer crime and information terrorism; Threats to information resources, including military and economic espionage, communications eavesdropping, computer break-ins, denial-of-service,

destruction and modification of data, distortion and fabrication of information, forgery, control and disruption of information flow, electronic bombs, and perception management.

**Defenses:** Countermeasures including authentication, encryption, auditing, monitoring, intrusion detection, and firewalls, and the limitations of those countermeasures. Introduction to Open Source Intelligence (OSINIT), web intelligence and social media intelligence. Cyberspace law and law enforcement, information warfare and the military, and intelligence in the information age

**Text Books/Reference Books/Online Resources:**

1. Information Warfare, Ventre, John Wiley & Sons, 15-Feb-2016
2. J. Wiles and A.Reyes, The Best Damn Cybercrime and Digital Forensics Book Period, Syngress, 2007.

<b>Course Code:</b> <b>CS5280</b>	<b>Cryptography and Game Theory</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-------------------------------------	-----------------------------------

Pre-requisites: Foundations of Cryptography

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Apply Cryptography to advance Game Theoretic goals
<b>CO2</b>	Enrich equilibria with additional properties
<b>CO3</b>	Design better mechanisms.
<b>CO4</b>	Apply Game Theory to advance Cryptographic protocol design
<b>CO5</b>	Combine game-theoretic arguments into cryptographic proofs, or vice versa.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>		1	1	2		2
<b>CO2</b>				2		2
<b>CO3</b>		1	1	2		1
<b>CO4</b>	2	1	2			1
<b>CO5</b>	2	2		2		

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Background in Cryptography:** Basics: Indistinguishability, Encryption, Zero Knowledge, Secure Computation: Definitions, basic constructions, Fairness in secure computation: Definitions, constructions, impossibility results. Background in Game Theory: Zero-sum games, the min-max theorem, Normal form games: Nash equilibrium, correlated equilibrium, dominated strategies, approximate Nash equilibria.

**Extensive form games:** Subgame perfection, imperfect/incomplete information, Bayesian/sequential/trembling-hand equilibria. Cryptographic Game Theory: Computational notions of Nash Equilibria, Replacing trusted mediators via cryptographic means, Rational Secure computation: Basic formalisms, Rational secret sharing (Two-party and multi-party).

**Text Books/Reference Books/Online Resources:**

1. O. Goldreich, *Foundations of Cryptography*: Volumes 1 and 2. Cambridge University Press, 2004.
2. Noam Nisan, Tim Roughgarden, Eva Tardos, Vijay V. Vazirani, *Algorithmic Game Theory*, Cambridge University Press, 2007.
3. M. J. Osborne and A. Rubinstein, *A course in game theory*, MIT Press, 1994

<b>Course Code:</b>	<b>Malware Analysis</b>	<b>Credits</b>
<b>CS5281</b>		<b>3-0-0: 3</b>

Pre-requisites: Foundations of Cryptography

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand nature of malware and its capabilities
<b>CO2</b>	Know scientific and logical limitations on ability to combat malware.
<b>CO3</b>	Understand social, economic and historical context in which malware occurs.
<b>CO4</b>	Apply static and dynamic analysis techniques to synthetic and real life examples
<b>CO5</b>	Apply suitable measures based on the context to detect and mitigate popular infection methods.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1			2	2	1
<b>CO2</b>	1	1		2	2	2
<b>CO3</b>		1		3	3	
<b>CO4</b>		1	2	1		2
<b>CO5</b>		2	3	3	2	3

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

**Introduction:** The taxonomy of malware and its capabilities: viruses, Trojan horses, rootkits, backdoors, worms, targeted malware; History of malware

**The social and economic context for malware:** crime, anti-malware companies, legal issues, the growing proliferation of malware

**Basic Analysis:** Signature generation and detection; clone detection methods Static analysis theory: program semantics, and abstract interpretation framework

**Static Analysis:** System calls: dependency analysis issues in assembly languages; semantic invariance of system call sequences; abstract interpretation as a formal framework for detection; constraint-based analyses; semantic clones

**Dynamic Analysis:** virtualization: semantic gap; reverse engineering; hybridisation with static analysis; Overview of Windows file format, PEView.exe, Patching Binaries , Disassembly(objdump, IDA Pro), Similarity metrics: Kolmogorov Complexity; association metrics; other entropy based metrics; NLP based approaches

**Problems in large scale classification:** scalability; triage methods; Required FP rate Hiding: Polymorphism: compression encryption virtualization; Metamorphism: high level code obfuscation engines, on-board metamorphic engines, semantics-preserving rewritings; Frankenstein

**The theory of malware:** Rice's theorem and the undecidability of semantic equivalence; Adleman's proof of the undecidability of the presence of a virus; Cohen's experiments on detectability and self-obfuscation Advanced Dynamic Analysis: debugging tools and concepts, Malware Behavior - malicious activities and techniques, Analyzing Windows programs – WinAPI, Handles, Networking , COM, Data Encoding, Malware Countermeasures, Covert Launching and Execution, Anti Analysis- Anti Disassembly, VM, Debugging -, Packers – packing and unpacking, Intro to Kernel – Kernel basics, Windows Kernel API, Windows Drivers, Kernel Debugging - Rootkit Techniques- Hooking, Patching, Kernel Object Manipulation, Rootkit Anti- forensics, Covert analysis.

#### Text Books/Reference Books/Online Resources:

1. Michael Sikorski, Andrew Honig, *Practical Malware Analysis: The Hands-On Guide to Dissecting Malicious Software*, No Starch Press, 2012 (for lab work).
2. Jamie Butler and Greg Hoglund, *Rootkits: Subverting the Windows Kernel*, Addison-Wesley, 2005
3. Dang, Gazet, Bachaalany, *Practical Reverse Engineering*, Wiley, 2014.
4. Reverend Bill Blunden, *The Rootkit Arsenal: Escape and Evasion in the Dark Corners of the System*, Second Edition, Jones & Bartlett, 2012.

<b>Course Code:</b> <b>CS5282</b>	<b>Cyber Security</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Understand the cyber security fundamentals
<b>CO2</b>	Identify & Evaluate cyber security threats and vulnerabilities in Information Systems and apply security measures to real time scenarios
<b>CO3</b>	Design and implement appropriate security techniques and cyber policies to protect computers and digital information.
<b>CO4</b>	Identify common trade-offs and compromises that are made in the design and development process of Information Systems
<b>CO5</b>	Demonstrate the use of standards and cyber laws to enhance information security in the development process and infrastructure protection

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>			1			1
<b>CO2</b>	2		2	2		2
<b>CO3</b>	2		2	2		2
<b>CO4</b>	1			1		
<b>CO5</b>	2	1	3	1		3

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Cyber Security Fundamentals:** Network and Security Concepts-Information Assurance Fundamentals, Basic Cryptography, Symmetric and Asymmetric Encryption, Public Key Encryption, The Domain Name System (DNS), Firewalls, Virtualization, Radio-Frequency Identification.

**Threats and vulnerabilities:** Types of Threats- Malware, Phishing, Ransomware, Adware and Spyware, Trojan, Virus, Worms, Man-in-the-middle-attack, Scareware, Distributed Denial-Of- Service Attack, Rootkits, click-fraud. Vulnerability-Shellcode, Integer Overflow Vulnerabilities, Buffer Overflows, SQL Injection.

**Defense and mitigation measures:** Anti-virus scanners, static and dynamic methods, anti-analysis, evading obfuscations and run-time attacks.

**Cyber Forensics:** Memory and network Forensics for Windows and Linux internals, Forensic tools, OS hardening and RAM dump analysis, data acquisition, data extraction, volatility analyses for OS artifacts and other information. Automated malicious code analysis.

**Cybersecurity law and Regulations:** Introduction, Cyber Warfare, Deception in the Cyber-World, Legal Framework of Cyber Security.

**Text Books/Reference Books/Online Resources:**

1. James Graham, Richard Howard, Ryan Olson, CYBER SECURITY ESSENTIALS, Taylor and Francis Group, 2011.
2. Martti Lehto, Pekka Neittaanmäki, Cyber Security: Analytics, Technology and Automation, Springer, 2015
3. David Salomon, Foundations of Computer Security, Springer, 2006

<b>Course Code:</b> <b>CS5283</b>	<b>Elliptic Curve Cryptosystems</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Identify group properties of elliptic curves
<b>CO2</b>	Compute order of elliptic curve group
<b>CO3</b>	Design Public key cryptosystems
<b>CO4</b>	Analyse elliptic curves over $\mathbb{C}$ and hyper elliptic curves
<b>CO5</b>	Compute Weil and Tate pairing

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1		2		1	
<b>CO2</b>		1				1
<b>CO3</b>			1		2	
<b>CO4</b>		2				
<b>CO5</b>	1	1			2	

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Introduction: Wierstrauss Equation, The Group Law, Projective Space and the Point at Infinity, Proof of Associativity, Equations for Elliptic Curves, Coordinate Systems, The  $j$ -invariant, Endomorphisms, Singular Curves, Elliptic Curves mod  $n$ ; Tortion Points: Introduction about Torsion Points, Division Polynomials, The Weil Pairing, The Tate-Lichtenbaum Pairing; Elliptic Curve over Finite Fields- Zeta Functions: Introduction, The Frobenius Endomorphism, Determining the Group Order, A Family of Curves, Schoof's Algorithm, Super singular Curves; Discrete Logarithm Problem: Introduction, The Index Calculus, General Attacks on Discrete Logs, Attacks with Pairings, Anomalous Curves, Other Attacks; Elliptic Curve Cryptography: Introduction, The Basic Setup, Diffie-Hellman Key Exchange, Massey-Omura Encryption, ElGamal Public Key Encryption; Primality and Factorization of Integers: Primality, Complexity of factoring, RSA; Elliptic Curve OVER  $\mathbb{Q}$  - LUTZ-NAGELL Theorem: The Torsion Subgroup. The Lutz-Nagell Theorem, Descent and the Weak Mordell-Weil, Theorem Heights and the Mordell-Weil Theorem, Heights and the

Mordell-Weil Theorem, The Height Pairing, Fermat's Infinite Descent, 2-Selmer Groups; Shafarevich-Tate Groups, A Nontrivial Shafarevich-Tate Group, Galois Cohomology, Mordell-Weil Theorem; Elliptic Curve OVER  $\mathbb{C}$ : Doubly Periodic Functions, Tori are Elliptic Curves, Elliptic Curves over  $\mathbb{C}$ , Computing Periods, Division Polynomials, The Torsion Subgroup: Doud's Method, Division Polynomials; Complex Multiplication: Elliptic Curves over  $\mathbb{C}$ , Elliptic Curves over Finite Fields, Integrality of  $j$ -invariants, Numerical Examples, Kronecker's Jugendtraum; Isogeny: The Complex Theory, The Algebraic Theory, Velu's Formulas, Point Counting, Complements; Hyperelliptic Curves: Basic Definitions, Divisors: Weil pairing, Tate-Lichtenbaum pairing, Cantor's Algorithm, The Discrete Logarithm Problem.

**Text Books/Reference Books/Online Resources:**

1. L.C. Washington, *Elliptic curves: Number Theory and Cryptography*, CRC Press, 2008
2. H. Cohen and G. Frey, *Handbook of Elliptic curve and Hyperelliptic Curve Cryptography*, CRC Press, 2006.

<b>Course Code:</b> <b>CS5284</b>	<b>Secure Systems Engineering</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	-----------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course, the student will be able to

<b>CO1</b>	Identify and analyse vulnerabilities at hardware level
<b>CO2</b>	Identify micro architectural level security
<b>CO3</b>	Analyse and apply countermeasures to system level attacks
<b>CO4</b>	Apply malware analysis techniques at system level
<b>CO5</b>	Formally verify the security protocol

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2		2	2	1	1
<b>CO2</b>	2		3	2	1	1
<b>CO3</b>	3	2	2	3	3	3
<b>CO4</b>	2	1	2	3	3	3
<b>CO5</b>	1	3	2	2	1	1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Hardware Security:** Hardware Trojans and Detection – PUFs - Power Analysis Attacks and Countermeasures - Fault Attacks - Implementation Aspects of Crypto Algorithms (A case study of AES and ECC)

**Micro Architectural Security:** Timing attacks and Covert Channels - RAM based attacks - Cold boot - Rowhammer – Operating System Security Stack Smashing Attacks - Dynamic Memory Allocation Attacks - Format String Vulnerabilities - return-to-libc attacks - ROP attacks - Side Channel Attacks in Operating Systems – Countermeasures - Non-executable stacks - Capability based Systems - Canaries - Malware Analysis Techniques

**Application Security:** SQL Insertion - Shell Shock - Heart bleed bug – Formal Verification of Security Protocols

**Text Books/Reference Books/Online Resources:**

1. Timing Channels in Cryptography, A Micro- Architectural Perspective Timing Channels in Cryptography, Chester Rebeiro, Debdeep Mukhopadhyay and Sarani Bhattacharya, Springer, 2015
2. Secure Systems Engineering, ISEA Study Material, IIT Madras, Available by March 2017

<b>Course Code:</b> <b>CS5285</b>	<b>Privacy and Security for online social networks</b>	<b>Credits</b> <b>3-0-0: 3</b>
--------------------------------------	--------------------------------------------------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course, the student will be able to:

<b>CO1</b>	Identify pitfalls in social networks
<b>CO2</b>	Analyse trust management in Online social networks
<b>CO3</b>	Analyse and apply countermeasures to control information sharing in Online social networks
<b>CO4</b>	Apply identity management in Online social networks
<b>CO5</b>	APIs to analyse the online social networks

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	1		1	2	2	2
<b>CO2</b>	2		2	2	1	1
<b>CO3</b>	2		2	2	3	1
<b>CO4</b>	2		2	3	2	3
<b>CO5</b>	3		2	2	3	1

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

**Introduction to Online Social Networks:** Introduction to Social Networks, From offline to Online Communities, Online Social Networks, Evolution of Online Social Networks, Analysis and Properties, Security Issues in Online Social Networks, Trust Management in Online Social Networks, Controlled Information Sharing in Online Social Networks, Identity Management in Online Social Networks, data collection from social networks, challenges, opportunities, and pitfalls in online social networks, APIs; Collecting data from Online Social Media

**Trust Management in Online Social Networks:** Trust and Policies, Trust and Reputation Systems, Trust in Online Social, Trust Properties, Trust Components, Social Trust and Social Capital, Trust Evaluation Models, Trust, credibility, and reputations in social systems; Online social Media and Policing, Information privacy disclosure, revelation and its effects in OSM and online social networks; Phishing in OSM & Identifying fraudulent entities in online social networks

**Controlled Information Sharing in Online Social Networks:** Access Control Models, Access Control in Online Social Networks, Relationship-Based Access Control, Privacy Settings in Commercial Online Social Networks, Existing Access Control Approaches

**Identity Management in Online Social Networks :** Identity Management, Digital Identity, Identity Management Models: From Identity 1.0 to Identity 2.0 , Identity Management in Online Social Networks, Identity as Self-Presentation, Identity theft...

**Open Security Issues in Online Social Networks**

**Text Books/Reference Books/Online Resources:**

1. Security and Privacy-Preserving in Social Networks, Editors: Chbeir, Richard, Al Bouna, Bechara (Eds.), Springer, 2013.
2. Security and Trust in Online Social Networks, Barbara Carminati, Elena Ferrari, Marco Viviani, Morgan & Claypool publications.
3. Security and Privacy in Social Networks, Editors: Altshuler, Y., Elovici, Y., Cremers, A.B., Aharony, N., Pentland, A. (Eds.), Springer, 2013

<b>Course Code:</b> <b>CS5253</b>	<b>Network Security Laboratory</b>	<b>PCC</b>	<b>Credits</b> <b>0-0-2: 1</b>
--------------------------------------	------------------------------------	------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Develop secure traffic communication techniques in Internet applications.
<b>CO2</b>	Analyze mobile threats and malwares
<b>CO3</b>	Design and Implement secure routing and medium access protocols in emerging Networks.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>				2		2
<b>CO2</b>				2		2
<b>CO3</b>				2		2

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

Implementation of secure Internet protocols, Access control protocols, Network Anomaly Detection methods, Mobile IPv6, https protocol, Firewalls and Intrusion Detection Systems, Malware detection, Mobile application security models, Mobile threats and malware, Trust based protocols, Mobile web app security, Secure protocols for mobile adhoc networks, secure neighbor discovery, Wormhole detection mechanisms in wireless sensor networks, Secure routing in wireless adhoc and sensor networks, Secure MAC protocols.

**Text Books/Reference Books/Online Resources:**

1. John R. Vacca, *Computer and Information Security Handbook*, Elsevier, 2009
2. L. Buttyan, J. P. Hubaux, *Security and Cooperation in Wireless Networks*, Cambridge University Press, 2008.
3. W. Trappe, L. C. Washington, *Introduction to Cryptography with Coding Theory*, Prentice-Hall 2005
4. NouredineBoudriga, *Security of Mobile Communications*, Auerbach Publications, Taylor and Francis Group, 2010.

<b>Course Code:</b> <b>CS5254</b>	<b>Data Privacy Lab</b>	<b>PCC</b>	<b>Credits</b> <b>0-0-2: 1</b>
--------------------------------------	-------------------------	------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Implementation of differential privacy mechanism for numeric, non-numeric and linear queries
<b>CO2</b>	Implement composition techniques in the design of mechanisms
<b>CO3</b>	Implement utility measurement of differential privacy to evaluate mechanisms
<b>CO4</b>	Classify the existing mechanisms into several types: transformation, partitioning of dataset, query separation and iteration.
<b>CO5</b>	Build a system that supports that differentially private data analysis.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	3	1	3	2	3	3
<b>CO2</b>	3	1	3	1	3	3
<b>CO3</b>	2	1	3	3	3	3
<b>CO4</b>	2	1	2	2	3	3
<b>CO5</b>	2	2	2	2	3	3

**1 - Slightly;      2 - Moderately;      3 – Substantially**

**Syllabus:**

1. Implement differential privacy using the Laplace mechanism for numeric data
2. Implement differential privacy using the Exponential mechanism for non-numeric data
3. Implement differential privacy using the Gaussian mechanism for linear queries
4. Implement Sequential/parallel composition theorems in the design of the above mechanisms
5. Implement the utility measurements such as Noise size and error for data publishing and analysis to evaluate the performance of differential privacy mechanisms.
6. Use Machine learning approach to classify the mechanisms into several types

**Text Books/Reference Books/Online Resources:**

1. C. Dwork and A. Roth, *The Algorithmic Foundations of Differential Privacy*, now Publishers, 2014.
2. Tianqing Zhu, Gang Li, Wanlei Zhou, Philip S. Yu, *Differential Privacy and Applications*, Springer International Publishing AG 2017.

<b>Course</b> <b>CS5154</b>	<b>Code:</b>	<b>Deep Learning Lab</b>	<b>PCC</b>	<b>Credits</b> <b>0-1-2: 2</b>
--------------------------------	--------------	--------------------------	------------	-----------------------------------

Pre-requisites: None

**Course Outcomes:** At the end of the course the student will be able to:

<b>CO1</b>	Implement Multilayer Feed Backward Neural network on MNIT digits dataset
<b>CO2</b>	Build RNN, LSTM, BiLSTM Networks for time series analysis classification problems.
<b>CO3</b>	Design Autoencoders to solve Unsupervised Learning problems
<b>CO4</b>	Implement Classical Supervised Tasks for Image Denoising, Segmentation and Object detection problems.

**Course Articulation Matrix:**

<b>Course Outcomes</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PO4</b>	<b>PO5</b>	<b>PO6</b>
<b>CO1</b>	2	2	1	1	1	1
<b>CO2</b>		2	2	2		
<b>CO3</b>			1	2		1
<b>CO4</b>	1	1	2		2	2

**1 - Slightly; 2 - Moderately; 3 – Substantially**

**Syllabus:**

Implement perceptron learning algorithm and attempt to solve two input i) AND gate ii) Or Gate iii) EXOR gate problems.

1. Design and implement a perceptron learning algorithm and attempt to solve XOR problem
2. Implement a Multilayer Feed Backward Neural network algorithm on MNIT digits dataset.
3. Build your own Recurrent networks and Long short-term memory networks on IMDB movie reviews classification data.
4. Design and implement a BiLSTM and BERT on given a product review dataset to classify the review rating from 1 to 5 classes
5. Design and implement Autoencoders for credit card fraud detection.
6. Design and implement a Convolutional Neural Network for image classification on the Fashion-MNIST dataset.
7. Implement a VGG19 model for image classification with and without Transfer Learning on Grocery dataset.
8. Implement a U-Net convolutional neural network model on segmentation of electron microscopic (EM) images of the brain dataset.
9. Implement a FRCNN algorithm for object detection on small object dataset

**Text Books/Reference Books/Online Resources:**

1. Deep Learning- Ian Goodfellow, Yoshua Benjio, Aaron Courville, The MIT Press.
2. Christopher Bishop, *Pattern Recognition and Machine Learning*, Springer, 2006.
3. Simon Haykin, "Neural Networks, A Comprehensive Foundation", 2nd Edition,  
Addison Wesley Longman, 2001.

<b>Course Code:</b> <b>CS5298</b>	<b>SEMINAR-II</b>	<b>Credits</b> <b>0-0-2: 1</b>
--------------------------------------	-------------------	-----------------------------------

Pre-Requisites: None

**Course Outcomes:**

At the end of the course, the student will be able to

<b>CO1</b>	Analyze the selected topic, organize the content and communication to audience in an effective manner
<b>CO2</b>	Practice the learning by self study

**Course Articulation Matrix:**

	<b>PO 1</b>	<b>PO 2</b>	<b>PO 3</b>	<b>PO 4</b>	<b>PO 5</b>	<b>PO 6</b>
<b>CO1</b>	2	3	1	1
